(ii) All borrow pits dug in the course of construction and repair of buildings, embankments etc. shall be deep and connected with each other in the formation of a drain directed towards the lowest level and properly stepped for discharge into a river, stream, channel or drain, and no person shall create any isolated borrow pit which is likely to cause accumulation of water that may breed mosquitoes.

(iii) Alternative materials, method of design and construction and tests:-

The provisions of the Regulations are not intended to prevent the use of any material or method of design of construction not specifically prescribed in them provided any such alternative has been approved. Nothing of the provisions of these Regulations is intended to prevent the adoption or architectural planning and layout conceived as an integrated development scheme. The Competent authority may approve any such alternative if it conforms to the provisions of the relevant parts of the National Building Code, regarding material, design and construction, and the material, method, or work offered is, for the purpose intended, at least equivalent to that prescribed in these Regulations in quality, strength, compatibility, effectiveness, fire and water resistance, durability and safety.

(iv) All buildings shall be constructed on a Quality Control Requirements

(4) TESTS:

Whenever there is insufficient evidence of compliance with the provisions of the Regulations or evidence that any material or method of design or construction does not conform to the requirements of the Regulations, in order to substantiate claims for alternative materials, design or methods of construction, the Competent Authority may require tests, sufficiently in advance, as proof of compliance. These tests shall be made by an approved agency at the expense of the owner as follows :-

(i) **TEST METHODS:-** Test methods shall be as specified by the Regulations for the materials or design or construction in question. If there are no appropriate test methods specified in the Regulations, the Competent Authority shall determine the test procedure. For methods or tests for building materials, reference shall be made to the relevant Indian Standards as given in the National Building Code of India published by the Bureau of Indian Standards.

(ii) **TEST RESULT TO BE PRESERVED:-** Copies of the result of all such tests shall be retained by the Competent Authority for not less than two years after the acceptance of the alternative material

The testing of the materials as per Indian Standards shall be carried out by laboratories approved by the competent authority in this behalf.

The laboratory/agency shall work out in consultation with the construction agency a testing programme of materials such as cement, steel and quality of concrete including its mixing, laying and strength at site as well as in the laboratory.

This should cover various stages of construction from foundation to completion as per Regulation. The laboratory shall maintain a duly authenticated report in a bound register, copy of which will be submitted to the construction agency, which will in turn forward the testing report to the competent authority.

(5) STRUCTURAL STABILITY AND FIRE SAFETY OF EXISTING BUILDINGS

- i. The Competent Authority shall have the assessment of structural and/or fire safety of an existing building/structure damaged/undamaged carried out at stipulated periodical intervals through expert(s) chosen from a panel of experts identified by the Competent Authority
- ii. The owner/developer/occupant on advise of such expert(s) shall carry out such repair/restoration and strengthening/retrofitting of the building found necessary so as to comply with the safety standards laid down in the National Building Code and the Indian Standards as specified.

In case, the owner/developer/occupant does not carry out such action, the competent authority or any agency authorised by the competent authority may carry out such action at the cost of owner/developer/occupant.

- iii. The Competent Authority shall specify the period within which such compliance is to be carried out.
- iv. The Competent Authority may also direct the owner/ developer/ occupants, whether the building could be occupied or not during the period of compliance.
- v. In case of existing building under construction based on approved building permission, structural safety requirements shall have to be observed. However, due to such structural work of strengthening/retrofitting if certain setbacks and margin get reduced, special permission shall be granted on case to case basis.

FIRE PROTECTION REQUIREMENTS

- (1) **GENERAL** :- The planning design and construction of any building shall be such as to ensure safety from fire. For this purpose, unless otherwise specified in these Regulations, the provisions of Part IV: Fire Protection Chapter, National Building Code, shall apply. For multi-storied, high-rise and special building, additional provisions relating to fire protection shall also apply. The approach to the building and open spaces on all sides up to 6 m. width and their layout shall conform to the requirements of the Chief Fire Officer. They shall be capable to taking the weight of a fire engine weighing up to 18 tones. These open spaces shall be free of any obstruction and shall be moterale.
- (2) **EXITS** :- Every building meant for human occupancy shall be provided with exits sufficient to permit safe escape of its occupants in case of fire or other emergency for which the exits shall conform to the following.
 - (i) **TYPES** :- Exits should be horizontal or vertical. A horizontal exit may be a door-way a corridor, a passage-way to an internal or external stairway or to an adjoining building, a ramp, a verandah or a terrace which has access to the street or to the roof of a building. A vertical exit may be a staircase or a ramp, but not a lift.
 - (ii) **GENERAL REQUIREMENTS** :- Exits from all the part of the building, except those not accessible for general public use, shall:
 - (a) provide continuous egress to the exterior of the building or to an exterior open space leading to the street;

- (b) be so arranged that, except in a residential building, they can be reached without having to cross another occupied unit;
- (c) be free of obstruction;
- (d) be adequately illuminated;
- (e) be clearly visible with the routes reaching them clearly marked and signs posted to guide any person to the floor concerned;
- (f) be fitted if necessary, with fire fighting equipment suitably located but not as to obstruct the passage, clearly marked and with its location clearly indicated on both sides of the exit way;
- (g) be fitted with a fire alarm device, if it is either a multi-storied, high-rise or a special building so as to ensure its prompt evacuation;
- (h) remain unaffected by any alteration of any part of the building so far as their number, width, capacity and protection thereof is concerned;

 - (ii) Assembly, business, mercantile, industrial and storage buildings : 30 m.

NOTE:- The travel distance to an exit from the dead end of a corridor shall not exceed half the distance specified above.

When more than one exit is required on a floor, the exits shall be as remote from each other as possible.

Provided that for all multi-storied high rise and special buildings, a minimum of two enclosed type staircases shall be provided, at least one of them opening directly to the exterior to an interior, open space or to any open place of safety.

LAND USE ZONING IN HAZARD PRONE AREAS – GUIDELINES (Regulation No. 32.1)

1 OBJECTIVES

- 1.1 The basic objective of land use zoning is to regulate land use in hazard prone areas to minimise the damage caused to the habitat, as a result of natural hazards viz earthquakes, cyclonic storms and floods which recur from time to time. Land Use Zoning, therefore, aims at determining the locations and the extent of areas likely to be adversely affected by the hazards of different intensities and frequencies, and to develop such areas in a fashion that the loss to the development is reduced to the minimum.
- 1.2 Land Use Zoning envisages certain restrictions on the indiscriminate development of the "unprotected" hazard prone areas and to specify conditions for safer development by protecting the area from severe losses. In the former case, boundaries of different zones are to be established to prevent unrestricted growth there.

2. SCOPE

2.1 Areas covered under Development Plan

The guidelines for Land Use Zoning in Hazard Prone Areas are to be taken into consideration while formulating the Development Plan and Area Plan under the Town Planning and Urban Development Act.

2.2 Areas not covered under Development Plan

In such areas, these guidelines may be issued to the various local bodies, Municipalities, Individual Areas and Panchayats, enabling them to act while siting various development projects and deciding on construction of buildings, etc.

3. IDENTIFICATION OF HAZARD PRONE AREAS

3.1 Earthquake Prone Areas

- a. Intensities of VII or more on Modified Mercalli or MSK intensity scale are considered moderate to high. Areas under seismic zone III, IV and V as specified in IS 1893 are based on intensities VII, VIII, IX or more. Therefore, all areas in these three zones will be considered prone to earthquake hazards.
- b. In these zones the areas which have soil conditions including the level of water table favourable to liquefaction or settlements under earthquake vibrations will have greater risk to buildings and structures which will be of special consideration under Land Use Zoning.
- c. Under these zones, those hilly areas which are identified to have poor stability conditions and where landslides could be triggered by earthquake or where due to prior saturated conditions, mud flow could be initiated by earthquakes and where avalanches could be triggered by earthquake will be specially risk prone.
- d. Whereas, earthquake hazard prone areas defined in 'a' above are identified on the

map given in IS 1893 to small scale and more easily identified in the larger scale statewise maps given in the Vulnerability Atlas of India, the special risky areas as defined in 'b' and 'c' above, have to be determined specifically for the planning area under consideration through special studies to be carried out by geologists and geo-technical engineers.

3.2 Cyclone Prone Areas

- a. Areas prone to cyclonic storms are along the sea coast of India where the cyclonic wind velocities of 47 meter per second or more are specified in the Wind Velocity Map given in IS 875 (part 3) to a small scale and easily identified in the Vulnerability Atlas of India where the Maps are drawn statewise to a larger scale.
- b. In these cyclone prone areas, those areas which are likely to be subjected to heavy rain induced floods or to flooding by sea-water under the conditions of storm surge, are specially risky due to damage by flood flow and inundation under water.
- c. Whereas, areas under 'a' are easily identified, those with special risk as under 'b' have to be identified by special contour survey of the planning area under consideration and study of the past flooding and storm surge history of the area. These studies may have to be carried out through the Survey of India or locally appointed survey teams, and by reference to the Central Water Commission, Government of India and the concerned department of Gujarat State.

3.3 Flood Prone Areas

- a. The flood prone areas in river plains (unprotected and protected by bunds) are indicated in the Flood Atlas of India prepared by the Central Water Commission and reproduced on larger scale in the statewise maps in the Vulnerability Atlas of India.
- b. Besides the above areas, other areas can be flooded under conditions of heavy intensity rains, inundation in depressions, backflow in drains, inadequate drainage, failure of protection works, etc.
- c. Whereas, the flood prone areas under 'a' are identified on the available maps as indicated, the areas under 'b' have to be identified through local contour survey and study of the flood history of the planning area. Such studies may be carried out through Survey of India or local survey teams, and by reference to the Central Water Commission and the concerned department of Gujarat State.

3.3.1 Land Use Zoning for Flood Safety

Some important considerations for regulating the land use in the planning areas are given below:

- i. Every settlement needs some open areas such as parks, play-grounds, gardens etc. In one way it will be possible to develop such areas by restricting any building activity in vulnerable areas. Such a development will be in the interest of providing proper environment for the growth of such settlement.

- ii. On the same analogy, certain areas on either side of the existing and proposed drains (including rural drains) should be declared as green belts where no building or other activity should be allowed. This will not only facilitate improvements of these drains in future for taking discharges on account of growing urbanisation, but will also help in minimising the damage due to drainage congestion wherever rainfall of higher frequency than designed is experienced. These green belts at suitable locations can also be developed as parks and gardens.
- iii. In the existing developed areas, possibilities of protecting/ relocation/ exchanging the sites of vital installation like electricity sub-station/power houses, telephone exchange, etc. should be seriously examined, so that these are always safe from possible flood damage. Similarly, the pump station on the tubewells meant for drinking water supply should be raised above the high flood levels.
- iv. Similarly, possibility of removing or bypassing buildings/structures obstructing existing natural drainage lines should be seriously considered. In any case, with immediate effect unplanned growth can be restricted so that no construction obstructing natural drainage or resulting in increased flood hazard is allowed.

4. APPROACH FOR LAND USE ZONING

Following two alternatives can be adopted for dealing with the disaster risk problems.

- a. *Leaving the area unprotected.* In this case it will be necessary to specify Land Use Zoning for various development purposes as recommended under Para 6.
- b. Using protection methods for the areas as a whole or in the construction of buildings, structures and infrastructure facilities to cater for the hazard intensities likely in the planning area as recommended under Appendix-B.

It will be appropriate to prioritise buildings, structures and infrastructures in terms of their importance from the point of view of impact of damage on the socio-economic structure of the society. Prioritisation scheme is suggested under Para 5.

5. PRIORITISATION

In regard to Land Use Zoning, different types of buildings and utility services may be grouped under three priorities as indicated below.

Priority 1. Defence installation, industries, public utilities like hospitals, electricity installations, water supply, telephone exchange, aerodromes, railway stations, commercial centres, libraries, other buildings or installations with contents of high economic value.

Priority 2. Public institutions, Government offices, universities and residential areas.

Priority 3. Parks, play grounds, wood lands, gardens

6. REGULATION FOR LAND USE ZONING

- i. Installations and Buildings of Priority 1 should be located in such a fashion that the area is above the levels corresponding to a 100 year flood or the maximum observed flood levels whichever higher. Similarly they should also be above the levels corresponding to a 50 year rainfall flooding and the likely submersion due to drainage congestion.
- ii. Buildings of Priority 2 should be located outside the 25 year flood or a 10 year rainfall contour, provided that the buildings if constructed between the 10 and 25 year contours should have either high plinth level above 25 year flood mark or constructed on columns or stilts, with ground area left for the unimportant uses.
- iii. Activities of Priority 3 viz. play grounds, gardens and parks etc. can be located in areas vulnerable to frequent floods.

Appendix - B

PROTECTION OF BUILDINGS STRUCTURES AND INFRASTRUCTURES IN HAZARD PRONE AREAS (Building Regulation No. 32.1)

A. PROTECTION OF AREAS FROM EARTHQUAKES

- i. In those areas where there are no dangers of soil liquefaction or settlements or landslides, all building structures and infrastructures should be designed using the relevant Indian Standards as provided in the Building Regulations and the National Building Code
- ii. Soils subjected to liquefaction potential under earthquake shaking, can be improved by compaction to desired relative densities, so as to prevent the possibility of liquefaction.
- iii. Buildings and structures could be founded on deep bearing piles going to non-liquefiable dense layers.
- iv. Steep slopes can be made more stable by terracing and construction of retaining walls and breast walls, and by ensuring good drainage of water so that the saturation of the hill-slope is avoided.
- iii. Any other appropriate engineering intervention to save the building structures or infrastructure from the fury of the earthquake.

Note : The protective action given under (ii) to (v) will usually involve large amount of costs and should only be considered in the case of large and costly structures. For ordinary buildings the cost of improvement of the site will usually be uneconomical, hence bad sites should be excluded by Land Use Zoning.

B. PROTECTION FROM CYCLONIC WIND DAMAGE

- i. Buildings, structures and infrastructures in the cyclone prone areas should be designed according to the Indian Standards and Guidelines as provided in the Regulations and the National Building Code.
- ii. Light utility structures used for electrical transmission and distribution, and towers for communications, chimney stacks of industrial structures require special design considerations against the cyclonic wind pressures, suctions and uplifts.
- iii. In case the buildings, structures and infrastructures are founded on marine clay deposits it will be advisable to adopt either under-reamed piled foundations, or individual column footing with a reinforced concrete beam located at the level of the ground, or a continuous reinforced concrete strip footing.
- iv. Wherever, the top soil could become slushy due to flooding, the top layer of 30 cm depth of soil should not be considered for providing lateral stability.
- v. In storm surge prone areas, it will be preferable to construct the community structures, like schools, cyclone shelters, etc. by raising the level of the ground protected by provision of retaining walls at sufficient distance away from the building, taken to such depth that no erosion takes place due to receding storm surge. Alternatively, construct the community structures on stilts with no masonry or bracing upto the probable maximum surge level.

C. PROTECTION OF AREAS FROM FLOODS

This may require one or more of the following actions.

- i. Construction of embankments against the water spills from the source of flooding like rivers, large drain etc.
- ii. Construction of high enough embankments/bund around the planning area.
- iii. Raising the planning area above the high flood level.
- iv. Construction/improvement of drainage paths to effectively drain the water from the planning area.
- v. Construction of buildings and structures on deep foundations going below the depth of scour or on stilts with deep enough foundations under water.
- vi. Flood proofing works such as the following:
 - Providing Quick Drainage facility, consisting of
 - Revitalisation of secondary and primary drainage channels after establishing the drainage blockage points;
 - Provision of additional waterways;
 - Clearing of clogged cross drainage works;
 - Providing Human and Animal Shelters for population living within embankments in the form of raised platform or use of available high ground.
- vii. Anti-erosion actions in affected areas
- viii. Any other suitable measure.

- Note:
1. Similar protection methods could be used against flooding caused in cyclone prone areas by high intensity rains or by the storm surge.
 2. The concept of land zoning should be kept in mind for areas where protection works are taken up to decide inter-se. priority for location of structures considering possibility of failure of protection works during extreme disaster events.

ક્રમાંક : જીએચકેએચ/૬/૨૦૦૪/એપીએમ/૩૫૦૩/૨૦૦૪/ગ.- ખેતીવાડી ઉત્પન્ન બજાર સમિતિ, પ્રાંગધા જી. સુરેન્દ્રનગર એ ગુજરાત ખેત ઉત્પન્ન બજાર અધિનિયમ-૧૯૬૩ અને ગુજરાત ખેત ઉત્પન્ન બજારો બાબતના નિયમો, ૧૯૬૫ હેઠળ સંસ્થાપિત સંસ્થા છે. અને સદરહુ અધિનિયમ, નિયમો તથા બજાર સમિતિના નોંધાયેલા પેટા નિયમો હેઠળ તેના ઉપર નાંખવામાં આવેલ ફરજો અને કાર્યો બજાવવા બંધાયેલ છે. સરકારશ્રી તથા નિયામક, ખેત બજાર અને ગ્રામ્ય અર્થતંત્ર, ગુજરાત રાજ્ય, ગાંધીનગર ધ્વારા વખતોવખત અપાતી સ્થાયી સૂચનાઓ, પરિપત્રોના પરિપેક્ષમાં બજાર સમિતિના હિતને લક્ષમાં લઈ ફરજો અને કાર્યો બજાવવાના રહે છે.

ખેતીવાડી ઉત્પન્ન બજાર સમિતિ, પ્રાંગધા જી. સુરેન્દ્રનગર (કે જેનો હવે પછી “બજાર સમિતિ” તરીકે ઉલ્લેખ કરવામાં આવશે) એ ગુજરાત ખેત ઉત્પન્ન બજાર અધિનિયમ, ૧૯૬૩ તથા ગુજરાત ખેત ઉત્પન્ન બજારો બાબતના નિયમો, ૧૯૬૫ હેઠળ બજાર સમિતિ ઉપર નાંખવામાં આવેલી ફરજો બજાવવામાં દુરાગ્રહપૂર્વક કસુર કરવા અને સ્થાયી સૂચનાઓનો અમલ નહી કરી, તેને મળેલી સત્તાઓ/અધિકારોનો મનસ્વીપણે દુરુપયોગ કર્યાનું અને જેના કારણે બજાર સમિતિને આર્થિક નુકશાન થયેલ હોવાનું સરકારશ્રીના ધ્યાને આવેલ છે.

બજાર સમિતિની કામગીરી સામે થયેલ ફરીયાદ સંદર્ભે નાયબ નિયામકશ્રી, ખેત બજાર અને જિલ્લા રજિસ્ટ્રારશ્રી સહકારી મંડળીઓ, સુરેન્દ્રનગરએ તપાસ કરી અહેવાલ કરેલ. જિલ્લા રજિસ્ટ્રારશ્રી, સુરેન્દ્રનગર ધ્વારા થયેલ તપાસ અહેવાલ નિયામકશ્રી, ખેત બજાર અને ગ્રામ્ય અર્થતંત્ર, ગુજરાત રાજ્ય, ગાંધીનગર ધ્વારા મળતાં, સદર અહેવાલમાં જાહેર થયા મુજબ :-

બજાર સમિતિના કાર્યવાહકો તેઓને મળેલ બજાર ધારાની કલમ ૨૩ અને ૨૬ થી સુપ્રત કરવામાં આવેલ ફરજો બજાવવામાં નિષ્કાળજી/દુર્લક્ષ સેવી બજાર સમિતિના નાણાકીય હિતને નુકશાન થાય તેવા નિર્ણયો લીધેલ હોવાનું અને કલમ-૨૩ તથા ૨૬ અન્વયે તેઓને સુપ્રત કરવામાં આવેલ ફરજો બજાવવામાં દુરાગ્રહપૂર્વક કસુર કરેલ હોવાનું જાહેર થયેલ છે. જેથી ઉક્ત અહેવાલના આધારે સંસ્થાના હિતમાં અને બજાર અધિનિયમના અસરકારક અમલીકરણ માટે હાલની બજાર સમિતિને શા માટે બરતરફ ન કરવી ? તેના કારણો જણાવવા તથા મૌખિક રજૂઆતો કરવા બજાર સમિતિને આ વિભાગની સરખા ક્રમાંકની તા. ૧૦/૭/૦૩ની કારણદર્શક નોટિસ બજાવવામાં આવેલ હતી.

અને તા. ૨૫/૭/૦૩ના રોજ સુનાવણી મુકરર કરવામાં આવી હતી. પરંતુ ઉક્ત તારીખે અન્ય કામગીરીની વ્યસ્તતાના કારણે તા. ૨/૮/૦૩ના રોજ સુનાવણી મુકરર કરી બજાર સમિતિને જાણ કરેલ હતી. તા. ૨/૮/૦૩ના રોજ બજાર સમિતિના વકીલશ્રીએ લેખિત રજૂઆત કરીને મુદત માંગેલ, સાથે સાથે આ કારણદર્શક નોટિસને તેમણે નામ. વડી અદાલતમાં સ્પે.સી.એ.નં. ૨૦૧૬૭/૦૩થી પડકારેલ હોવાનું તથા તેમાં મનાઈ હુકમ મળેલ હોવાનું જણાવેલ. તા. ૪/૮/૦૩ના રોજના વડી અદાલતના તા. ૫/૮/૦૩ના હુકમની નકલ બજાર સમિતિના વકીલે રજૂ કરેલ. જેમાં જસ્ટીસશ્રી કે. એ. પુજ સા. એ આદેશ આપેલ કે, “બજાર સમિતિ વિરુદ્ધ જો કોઈ નિર્ણય લેવાય તો તેનો અમલ ૧૦ દિવસ સુધી કરવો નહીં” બજાર સમિતિ તરફથી લેખિત જવાબ તા. ૭/૮/૦૩ ના રોજ રજૂ કરેલ હતો. તેના અનુસંધાને તા. ૭/૧૦/૦૩ ના રોજ લેખિત/મૌખિક સુનાવણી મુકરર કરવામાં આવેલ હતી. પરંતુ ઉક્ત તારીખ/સમયે બજાર સમિતિ તરફ કોઈ ઉપસ્થિત ન રહી, કોઈ લેખિત/મૌખિક જવાબ રજૂ કરેલ નહતો. તેમ છતાં, વધુ સુનાવણીની એક તક આપી તા. ૨૩/૧૦/૦૩ ના રોજ મુકરર કરેલ. જે વખતે બજાર સમિતિ તરફ એડવોકેટશ્રી દીલીપસિંહ પરમારએ હાજર રહી મૌખિકમાં રજૂઆત કરવા મુદતની માંગણી કરતાં અને સદર મુદતે રજૂઆત કરવાની ખાત્રી આપતાં વધુ એક મુદત તા. ૩૦/૧૦/૦૩ ના રોજની મુકરર કરવામાં આવેલ. પરંતુ ઉક્ત તારીખે પણ તેઓએ મુદત માંગેલ, જે પણ ગ્રાહ્ય રાખી તા. ૧૫/૧૧/૦૩ના રોજ તથા તા. ૧૩/૧/૨૦૦૪ના રોજ સુનાવણી મુકરર કરવામાં આવેલ હતી, અને ઉક્ત તા. ૧૩/૧/૦૪ના રોજ તેઓને સાંભળી અને સાંભળવાની પુરતી તક આપવામાં આવેલ હતી.

અત્રેની કારણદર્શક નોટીસ તથા તે અન્વયે બજાર સમિતિએ કરેલ લેખિત જવાબ અને મૌખિક રજૂઆતને કાળજીપૂર્વક વિચારણામાં લેતાં, જે બાબત ફલીત થાય છે, તે અંગેનું તારણ નીચે જણાવ્યા મુજબ થાય છે.

મુદ્દા નં.-૧ : બજાર સમિતિએ નિયમ વિરુદ્ધ અને સગાવાદના ધોરણે ભરતી કરવા બાબત.

બજાર સમિતિના ચેરમેનશ્રીના પુત્ર મહેશ જે. કાવરની ભરતી રદ કરી છૂટા કરવા નિયામકશ્રી, ખેત બજાર અને ગ્રામ્ય અર્થતંત્ર, ગાંધીનગરના તા. ૮/૫/૨૦૦૦ના રોજ કરેલ હુકમનો અમલ કરવાને બદલે બજાર સમિતિએ નાયબ સચિવશ્રી, (અપીલ) સહકાર વિભાગમાં રીવીઝન અરજી નં. ૧૦૦/૨૦૦૦ દાખલ કરેલ. જેનો નિર્ણય નાયબ સચિવશ્રી (અપીલ)એ તેઓના તા. ૪/૨/૦૩ના હુકમથી આપેલ. જેમાં અરજદારની રીવીઝન અરજી રદ કરી નિયામકશ્રી, ખેત બજાર અને ગ્રામ્ય અર્થતંત્ર, ગુ. રા. ગાંધીનગરનો તા. ૮/૫/૨૦૦૦નો હુકમ કાયમ રાખવામાં આવેલ છે. જેનો અમલ બજાર સમિતિ ધ્વારા ન કરતાં, નિયામકશ્રી, ખેત બજાર અને ગ્રામ્ય અર્થતંત્ર, ગાંધીનગર એ તા. ૮/૪/૦૩ના પત્રથી હુકમની અમલવારી કરવા બજાર સમિતિને જરૂરી સૂચના આપેલ અને તેની અમલવારી અહેવાલ મોકલી આપવા જિલ્લા રજિસ્ટ્રારશ્રી, સહકારી મંડળીઓ, સુરેન્દ્રનગરને સૂચના આપેલ. જે અન્વયે જિલ્લા રજિસ્ટ્રારશ્રી, સહકારી મંડળીઓ, સુરેન્દ્રનગરએ અહેવાલ કરેલ છે કે, બજાર સમિતિએ નાયબ સચિવશ્રીના હુકમનો આજ દિન સુધી અમલ કરેલ નથી. અને સરકારશ્રી બજાર ધારાની જોગવાઈ અંતર્ગતના હુકમનું ઉલ્લંઘન કરી બજાર સમિતિના કાર્યવાહકોએ ફરજ બજાવવામાં કસૂર કરેલ છે.

બજાર સમિતિએ તેમના જવાબમાં જણાવેલ છે શ્રી મહેશ કાવરની ભરતી રદ કરી છૂટા કરવાના નિયામકશ્રીના તા. ૮/૫/૨૦૦૦ના હુકમને બહાલ રાખતા નાયબ સચિવશ્રી (અપીલ)ના તા. ૪/૨/૦૩ના હુકમ સામે શ્રી મહેશ કાવરે રેગ્યુલર સીવીલ સ્યુટ નંબર ૩૭/૨૦૦૦ પ્રાંગધા સીવીલ કોર્ટમાં દાખલ કરેલ છે અને તેમાં તેમણે મનાઈ હુકમ મેળવેલ છે. પ્રાંગધા સીવીલ કોર્ટના તા. ૨૮/૫/૦૧ના હુકમમાં જણાવેલ છે કે, “યથાવત સ્થિતિ” જાળવવી, એટલે કે, શ્રી મહેશ કાવરની સેવાઓ ચાલુ રાખવી. તેમજ શ્રી મહેશ કાવરે નાયબ સચિવશ્રી, (અપીલ)ના તા. ૪/૨/૦૩ના હુકમને પણ વડી અદાલતમાં પડકારેલ છે. જે હજી વડી અદાલતમાં પડતર છે.

બજાર સમિતિની આ રજૂઆત ગ્રાહ્ય રાખી શકાય તેમ નથી. કારણ કે, નિયામકશ્રીના તથા નાયબ સચિવશ્રીના હુકમનું જો બજાર સમિતિએ પાલન કરાવવું જ હોય તો પ્રાંગધા સીવીલ કોર્ટના તા. ૨૮/૫/૦૧નો હુકમ સામે બજાર સમિતિએ સક્ષમ ઉપલી અદાલત સમક્ષ અપીલ કરી હોત અથવા તો ‘સ્ટેટસ્કવો’ નો હુકમ ઉઠાવી લેવા રજૂઆત કરી હોત. પરંતુ બજાર સમિતિ તરફ આ બાબતે કોઈ અસરકારક રજૂઆત કરેલ હોય કે અપીલ કરેલ હોય તેના કોઈ સાધનિક કાગળો રજૂ કરેલ નથી. જે સાબિત થાય છે. કારણ કે શ્રી મહેશ કાવરના પિતાશ્રી બજાર સમિતિના ચેરમેન છે અને સગાવાદને પોષી આગળની કોઈ કાર્યવાહી કરેલ નથી. વળી, પ્રાંગધા સીવીલ કોર્ટનો તા. ૨૮/૫/૦૧નો વચગાળાનો સીવીલ સ્યુટ નં. ૩૭/૨૦૦૦નો હુકમ જોઈએ તે, તેમાં મનાઈ હુકમ માટેના જે કારણો છે. તેમાં એક કારણ એવું પણ છે કે, બજાર સમિતિ, પ્રાંગધાએ નિયામકશ્રીના હુકમ સામે અપીલ કરેલ છે. જે હજી પેન્ડિંગ છે. નાયબ સચિવશ્રીએ તા. ૪/૨/૦૩ના રોજ હુકમ કરેલ છે. ત્યારબાદ, પણ બજાર સમિતિએ નામ. સીવીલ કોર્ટનું ધ્યાન દોરી મનાઈ હુકમ ઉઠાવી લેવાની કે દાવાનો નિકાલ ત્વરિત રીતે થાય તે દિશામાં કોઈ કાર્યવાહી થવી જોઈએ તે કરેલ નથી. જે જોતાં હાલની બજાર સમિતિ સગાવાદથી કરેલ ભરતી અન્વયે રાજ્ય સરકારના હુકમોનું પાલન જાણી જોઈને ન કરી, તેમને કાયદાથી સોંપવામાં આવેલ ફરજ બજાવવામાં કસૂર કરેલ હોવાનું સાબિત થાય છે.

મુદ્દા નં. ૨ :- બજાર સમિતિ ધ્વારા ફંડનો દુરુપયોગ થવા બાબત.

બજાર સમિતિ પ્રાંગપ્રાની ગત સામાન્ય ચૂંટણી સંદર્ભે સંબંધકર્તા સભ્યો તરફથી કેવીએટ અરજી ઇલેક્શન પીટીશન નં. ૪૭/૦૧ તથા સ્પે.સી.એ.નં. ૩૭૮/૦૨ અનુક્રમે રાજિવશ્રી, નિયામકશ્રી ખેત બજાર અને ગ્રામ્ય અર્થતંત્ર, તથા નામે. હાઈકોર્ટમાં દાખલ કરેલ. ઉક્ત ત્રણ પૈકી એકપણ પીટીશન અરજીમાં બજાર સમિતિ, પ્રાંગપ્રાને પક્ષકાર કરીકે જોડવામાં આવેલ નથી. તેમજ પીટીશનમાં માંગવામાં આવેલ દાદ અન્વયે બજાર સમિતિને કોઈ નુકશાન થવાની શક્યતા પણ નથી. તેમ છતાં બજાર સમિતિ ધ્વારા ઉક્ત કોર્ટ મેટરો અન્વયે રૂ. ૬૩,૦૦૦/-નો બિનજરૂરી વકીલ ફીનો ખર્ચ તા. ૮/૫/૦૨ની સામાન્ય સભાના ઠરાવ નં. ૫ થી કરાવીને બજાર સમિતિમાં ખર્ચ કરી બજાર ફંડનો દુરુપયોગ કરી બજાર સમિતિના કાર્યવાહકોએ પોતાની સત્તાનો દુરુપયોગ કરેલ છે.

બજાર સમિતિએ તેના જવાબમાં રજૂઆત કરેલ છે કે અપીલ નં. ૪૭/૦૧ એ નવીન ચૂંટાયેલા મેમ્બરો સામે ચૂંટણી અરજી થયેલ હતી. જ્યારે ૪૭/૦૧ના નિયામકના હુકમ સામે રીવીઝન થયેલ હતી. તેમજ સ્પે.સી.એ. નં. ૩૭૮/૦૨ નામ. હાઈકોર્ટમાં નવીન ચૂંટાયેલા સભ્યોના નામે નિયમ ૨૭ અન્વયે નિયામકશ્રીએ પ્રસિધ્ધ નહી કરતા તેની સામે થયેલ હતી. જે અંગેનો વકીલ ખર્ચ થયેલ છે. જ્યારે આ ખર્ચની વસુલાત માટે નિયામકશ્રી ખેત બજાર અને ગ્રામ્ય અર્થતંત્ર, ગુ. રા., ગાંધીનગરએ બજાર ધારાની કલમ-૫૦ અન્વયે નોટિસ કાઢેલ છે. જેથી આવા નાણાંની વસુલાત કલમ-૫૦ અન્વયે થઈ શકતી હોઈ, કલમ-૪૬ અન્વયે કાર્યવાહી થઈ શકે નહી.

આ મુદ્દે બજાર સમિતિએ કરેલ રજૂઆત પણ ગ્રાહ્ય રાખી શકાય નહી. કારણ કે, અપીલ નં. ૪૭/૦૧ એ ચૂંટણી અરજી હતી. જેમાં બજાર સમિતિને પક્ષકાર બનાવેલ ન હતી. જેમાં ચૂંટાયેલા સભ્યોને પક્ષકાર બનાવેલા હતા. પરંતુ તેઓએ કોઈ ચાર્જ સંભાળેલ ન હતો કે, તેની પ્રથમ મીટીંગ મળેલ ન હોઈ, તેમજ તેમના નામો નિયમ-૨૭ અન્વયે રાજ્યપત્રમાં પ્રસિધ્ધ થયેલ ન હોઈ, ચૂંટણીને લગતા કેસોમાં તેમની અંગત કેપેસિટીથી લડવાના થાય છે. આમાં બજાર સમિતિનો કોઈ રોલ ન હોઈ, આવા ખર્ચ બજાર સમિતિમાં પાડી શકાય નહી.

પ્રસ્તુત ત્રણેય કેસો અંગત કેપેસિટીથી થયેલ હોઈ, જે તે કેસોમાં બચાવ કરવાની જવાબદારી ચૂંટાયેલા સભ્યોની અંગત રહે છે. બજાર સમિતિ કે જે સંસ્થાપિત સંસ્થા (Legal Person) હોઈ, તે પક્ષકાર ન હોઈ તે સંસ્થામાં વ્યક્તિગત કેસનો ખર્ચ પાડી શકાય નહી. તેમ છતાં આ ખર્ચને બજાર સમિતિએ બહાલી આપી હોઈ, સમગ્ર બજાર સમિતિની જવાબદારી ઉભી થાય છે.

જ્યારે નિયામકશ્રીની કલમ-૫૦ની નોટિસ બાબતે બજાર સમિતિના વકીલે કરેલ રજૂઆત પણ ખોટી છે, કારણ કે, બજાર સમિતિને થયેલ નાણાકીય નુકશાન બજાર ધારાની કલમ-૫૦ અન્વયે વસુલ કરવાનું છે. જ્યારે કલમ-૪૬ એ બજાર સમિતિ તેને સોંપેલ ફરજ બજાવવામાં કસુર કરી હોય અથવા તો સત્તાનો દુરુપયોગ કરેલ હોય તો તેને પદચ્યુત કરી શકાય છે. પ્રસ્તુત મુદ્દે બજાર સમિતિએ તેને મળેલ સત્તાનો દુરુપયોગ કરી બજાર સમિતિને નાણાકીય નુકશાનની કરી છે અને મળેલ સત્તાનો દુરુપયોગ કરેલ છે. જેથી કલમ-૫૦ની કાર્યવાહી એ એક સ્વતંત્ર કાર્યવાહી છે, અને તે કલમ સભ્યોએ બજાર સમિતિને જે નુકશાન પહોંચાડ્યું છે, તે ભરપાઈ કરવાની બાબતેના પ્રોસીડીંગ્સ છે. અલગ કાર્યવાહી છે. જેથી આ મુદ્દે પણ રજૂઆત ગ્રાહ્ય રાખવામાં આવતી નથી.

બજાર સમિતિની એક રજૂઆત એવી છે કે, બજાર સમિતિની કામગીરી સંદર્ભે નિયામક કલમ-૪૪ અન્વયેની તપાસ કરાવી શકે છે. અને ત્યારબાદ કલમ-૪૫ તથા ૪૭ અન્વયે બજાર સમિતિને જરૂરી સૂચના આપી શકે છે. જેથી કલમ-૪૬ની કાર્યવાહી સીધી થઈ શકે નહી. બજાર સમિતિની આ રજૂઆત પણ ગ્રાહ્ય રાખી શકાય નહી. કારણ કે, પ્રાથમિક તપાસમાં કોઈ એવા મુદ્દા ઉપસ્થિત થયા હોય તેના કારણે વિગતવાર તપાસ માટે અભિપ્રાય થયો હોય તોજ કલમ-૪૪ અન્વયે તપાસ સોંપી શકાય છે. જ્યારે પ્રસ્તુત બંને મુદ્દાઓ તો પ્રાથમિક તપાસમાં સ્પષ્ટ રીતે બહાર આવેલ હેઈ, અન્ય કલમ-૪૪, ૪૫ તથા ૪૭ની કાર્યવાહી કરવી આવશ્યક નથી. જેથી બજાર સમિતિની આ દલીલ ગ્રાહ્ય રાખવાપાત્ર નથી. વધુમાં બજાર સમિતિએ પોતાના જવાબમાં રાજકીય દબાણ હોવાનો આશરો લીધેલ છે. આવી દલીલ હવે આજકાલ સામાન્ય બની ગઈ છે. ખરી હકીકતે બજાર સમિતિ સામે હાથ ધરવામાં આવેલ કાર્યવાહી ખેત ઉત્પન્ન બજાર અધિનિયમ, સરકારશ્રીની તથા નિયામકશ્રીની સૂચનાઓનું પાલન નહી કરી વારંવારની કસુર જણાતાં, હાથ ધરવામાં આવેલ હોઈ, રાજકીય દબાણની દલીલ ગ્રાહ્ય રાખવાપાત્ર નથી.

ઉપરોક્ત વિગતોએ સ્પષ્ટ રીતે ફલીત થાય છે કે, બજાર સમિતિ, પ્રાંગપ્રા એ ખેત ઉત્પન્ન બજાર અધિનિયમ ધ્વારા તેમના ઉપર લાદવામાં આવેલ ફરજો બજાવવામાં કસુર કરી છે અને કાર્યવાહી યોગ્ય રીતે નહી કરીને તથા વહીવટી અનિયમિતતા આચરીને સત્તા અને હોદ્દાનો મનસ્વીપણે દુરુપયોગ કરી સગાવાદને પ્રોત્સાહિત કરી, બીન જરૂરી લીટીગેશનમાં વકીલો રોકી, વકીલ ખર્ચ કરી અને બજાર સમિતિને નાણાકીય નુકશાન પહોંચાડ્યું છે, તેવા અભિપ્રાય ઉપર રાજ્ય સરકાર આવે છે. જેથી બજાર ધારાના અસરકારક અમલીકરણ માટે ખેત ઉત્પન્ન બજાર સમિતિ, પ્રાંગપ્રા, જી. સુરેન્દ્રનગરને હાલની કમીટીને બજાર ધારાની કલમ-૪૬(૧) હેઠળ પદચ્યુત કરવાની જરૂરિયાત પ્રસ્થાપિત થાય છે. સબબ, આ કામમાં નીચે મુજબ હુકમ પસાર કરવામાં આવે છે.

હુકમ

ઉપરોક્ત વિવરણના પરિપ્રેક્ષમાં તમામ બાબતો ધ્યાનમાં લેતાં આથી, ખેત ઉત્પન્ન બજાર અધિનિયમ-૧૯૬૩ની કલમ-૪૬(૧)થી મળેલ સત્તાની રુઠાં ખેત ઉત્પન્ન બજાર સમિતિ, પ્રાંગણા જી. સુરેન્દ્રનગરને પદચ્યૂત કરવામાં આવે છે. અને સદર બજાર સમિતિના કાર્યો બજાવવા માટે તથા તેનો વહીવટ કરવા નાયબ નિયામકશ્રી ખેત બજાર અને ગ્રામ્ય અર્થતંત્ર, અને જિલ્લા રજિસ્ટ્રારશ્રી, સહકારી મંડળીઓ, સુરેન્દ્રનગરની વહીવટદાર તરીકે નિમણૂક કરવામાં આવે છે.

આ હુકમનો અમલ નામ. ગુજરાત હાઈકોર્ટમાં દાખલ થયેલ સ્પે.સી.એ. નં. ૧૦૬૭૧/૨૦૦૩માં કરવામાં આવેલ હુકમના અનુસંધાને આ હુકમનો અમલ કોમ્યુનિકેટ થયાની તારીખથી દશ દિવસ બાદ કરવાનો રહેશે.

ગુજરાતના રાજ્યપાલશ્રીના હુકમથી અને તેમના નામે,

68. Regulation No.14.4 to 14.20 shall be replaced as under:

14.4 LAND USE ZONING IN HAZARD PRONE AREAS

The type of development in each land use zone shall be regulated as per Use Zone Table where ever permitted such zones and shall be applicable as per G.D.C.R. of other cities.

In Natural Hazard prone areas namely the earthquake prone zones as per IS:1893, the cyclone prone areas as per IS:875 Part-3 and flood prone areas as per the Flood Atlas prepared by the Central Water Commission and/or the flood departments of the State, the development shall be regulated to ensure special protection from hazards for any type of development irrespective of use zone. Whereas the hazard prone areas identified as per the Vulnerability Atlas of India-1997 (or revisions thereof) prepared by Govt. of India or as may be prepared by State Government from time to time shall be used for such regulations, as given in Appendix-A. Further action for protection from these hazards is to be dealt with taking into consideration the Guidelines given in Appendix-B.

Appendix-A

LAND USE ZONING IN HAZARD PRONE AREAS – GUIDELINES (Regulation No. 32.1)

1 OBJECTIVES

- 1.1 The basic objective of land use zoning is to regulate land use in hazard prone areas to minimise the damage caused to the habitat, as a result of natural hazards viz. earthquakes, cyclonic storms and floods which recur from time to time. Land Use Zoning, therefore, aims at determining the locations and the extent of areas likely to be adversely affected by the hazards of different intensities and frequencies, and to develop such areas in a fashion that the loss to the development is reduced to the minimum.
- 1.2 Land Use Zoning envisages certain restrictions on the indiscriminate development of the "unprotected" hazard prone areas and to specify conditions for safer development by protecting the area from severe losses. In the former case, boundaries of different zones are to be established to prevent unrestricted growth there.

2. SCOPE

2.1 Areas covered under Development Plan

The guidelines for Land Use Zoning in Hazard Prone Areas are to be taken into consideration while formulating the Development Plan and Area Plan under the Town Planning and Urban Development Act.

2.2 Areas not covered under Development Plan

In such areas, these guidelines may be issued to the various local bodies, Municipalities, Individual Areas and Panchayats, enabling them to act while siting various development projects and deciding on construction of buildings, etc.

3. IDENTIFICATION OF HAZARD PRONE AREAS

3.1 Earthquake Prone Areas

- a. Intensities of VII or more on Modified Mercalli or MSK intensity scale are considered moderate to high. Areas under seismic zone III, IV and V as specified

in IS 1893 are based on intensities VII, VIII, IX or more. Therefore, all areas in these three zones will be considered prone to earthquake hazards.

- b. In these zones the areas which have soil conditions including the level of water table favourable to liquefaction or settlements under earthquake vibrations will have greater risk to buildings and structures which will be of special consideration under Land Use Zoning.
- c. Under these zones, those hilly areas which are identified to have poor stability conditions and where landslides could be triggered by earthquake or where due to prior saturated conditions, mud flow could be initiated by earthquakes and where avalanches could be triggered by earthquake will be specially risk prone.
- d. Whereas, earthquake hazard prone areas defined in 'a' above are identified on the map given in IS 1893 to small scale and more easily identified in the larger scale statewide maps given in the Vulnerability Atlas of India, the special risky areas as defined in 'b' and 'c' above, have to be determined specifically for the planning area under consideration through special studies to be carried out by geologists and geo-technical engineers.

3.2 Cyclone Prone Areas

- a. Areas prone to cyclonic storms are along the sea coast of India where the cyclonic wind velocities of 47 meter per second or more are specified in the Wind Velocity Map given in IS 875 (part 3) to a small scale and easily identified in the Vulnerability Atlas of India where the Maps are drawn statewide to a larger scale.
- b. In these cyclone prone areas, those areas which are likely to be subjected to heavy rain induced floods or to flooding by sea-water under the conditions of storm surge, are specially risky due to damage by flood flow and inundation under water.
- c. Whereas, areas under 'a' are easily identified, those with special risk as under 'b' have to be identified by special contour survey of the planning area under consideration and study of the past flooding and storm surge history of the area. These studies may have to be carried out through the Survey of India or locally appointed survey teams, and by reference to the Central Water Commission, Government of India and the concerned department of Gujarat State.

3.3 Flood Prone Areas

- a. The flood prone areas in river plains (unprotected and protected by bunds) are indicated in the Flood Atlas of India prepared by the Central Water Commission and reproduced on larger scale in the statewide maps in the Vulnerability Atlas of India.
- b. Besides the above areas, other areas can be flooded under conditions of heavy intensity rains, inundation in depressions, backflow in drains, inadequate drainage, failure of protection works, etc.

- c. Whereas, the flood prone areas under 'a' are identified on the available maps as indicated, the areas under 'b' have to be identified through local contour survey and study of the flood history of the planning area. Such studies may be carried out through Survey of India or local survey teams, and by reference to the Central Water Commission and the concerned department of Gujarat State.

3.3.1 Land Use Zoning for Flood Safety

Some important considerations for regulating the land use in the planning areas are given below:

- i. Every settlement needs some open areas such as parks, play-grounds, gardens etc. In one way it will be possible to develop such areas by restricting any building activity in vulnerable areas. Such a development will be in the interest of providing proper environment for the growth of such settlement.
- ii. On the same analogy, certain areas on either side of the existing and proposed drains (including rural drains) should be declared as green belts where no building or other activity should be allowed. This will not only facilitate improvements of these drains in future for taking discharges on account of growing urbanisation, but will also help in minimising the damage due to drainage congestion wherever rainfall of higher frequency than designed is experienced. These green belts at suitable locations can also be developed as parks and gardens.
- iii. In the existing developed areas, possibilities of protecting/ relocation/ exchanging the sites of vital installation like electricity sub-station/power houses, telephone exchange, etc. should be seriously examined, so that these are always safe from possible flood damage. Similarly, the pump station the tubewells meant for drinking water supply should be raised above the high flood levels.
- iv. Similarly, possibility of removing or bypassing buildings/structures obstructing existing natural drainage lines should be seriously considered. In any case, with immediate effect unplanned growth can be restricted so that no construction obstructing natural drainage or resulting in increased flood hazard is allowed.

4. APPROACH FOR LAND USE ZONING

Following two alternatives can be adopted for dealing with the disaster risk problems.

- a. *Leaving the area unprotected.* In this case it will be necessary to specify Land Use Zoning for various development purposes as recommended under Para 6.
- b. Using protection methods for the areas as a whole or in the construction of buildings, structures and infrastructure facilities to cater for the hazard intensities likely in the planning area as recommended under Appendix-B.

It will be appropriate to prioritise buildings, structures and infrastructures in terms of their importance from the point of view of impact of damage on the socio-economic structure of the society. Prioritisation scheme is suggested under Para 5.

5. PRIORITISATION

In regard to Land Use Zoning, different types of buildings and utility services may be grouped under three priorities as indicated below:

Priority 1. Defence installation, industries, public utilities like hospitals, electricity installations, water supply, telephone exchange, aerodromes, railway stations, commercial centres, libraries, other buildings or installations with contents of high economic value.

Priority 2. Public institutions, Government offices, universities and residential areas.

Priority 3. Parks, play grounds, wood lands, gardens.

6. REGULATION FOR LAND USE ZONING

- i. Installations and Buildings of Priority 1 should be located in such a fashion that the area is above the levels corresponding to a 100 year flood or the maximum observed flood levels whichever higher. Similarly they should also be above the levels corresponding to a 50 year rainfall flooding and the likely submersion due to drainage congestion.
- ii. Buildings of Priority 2 should be located outside the 25 year flood or a 10 year rainfall contour, provided that the buildings if constructed between the 10 and 25 year contours should have either high plinth level above 25 year flood mark or constructed on columns or stilts, with ground area left for the unimportant uses.
- ii. Activities of Priority 3 viz. play grounds, gardens and parks etc. can be located in areas vulnerable to frequent floods.

Appendix - B

PROTECTION OF BUILDINGS STRUCTURES AND INFRASTRUCTURES IN HAZARD PRONE AREAS (Building Regulation No. 32.1)

A. PROTECTION OF AREAS FROM EARTHQUAKES

- i. In those areas where there are no dangers of soil liquefaction or settlements or landslides, all building structures and infrastructures should be designed using the relevant Indian Standards as provided in the Building Regulations and the National Building Code.
- ii. Soils subjected to liquefaction potential under earthquake shaking, can be improved by compaction to desired relative densities, so as to prevent the possibility of liquefaction.
- iii. Buildings and structures could be founded on deep bearing piles going to non-liquefiable dense layers.
- iv. Steep slopes can be made more stable by terracing and construction of retaining walls and breast walls, and by ensuring good drainage of water so that the saturation of the hill-slope is avoided.
- iii. Any other appropriate engineering intervention to save the building structures or infrastructure from the fury of the earthquake.

Note : The protective action given under (ii) to (v) will usually involve large amount of costs and should only be considered in the case of large and costly structures. For ordinary buildings the cost of improvement of the site will usually be uneconomical, hence bad sites should be excluded by Land Use Zoning.

B. PROTECTION FROM CYCLONIC WIND DAMAGE

- i. Buildings, structures and infrastructures in the cyclone prone areas should be designed according to the Indian Standards and Guidelines as provided in the Regulations and the National Building Code.
- ii. Light utility structures used for electrical transmission and distribution, and towers for communications, chimney stacks of industrial structures require special design considerations against the cyclonic wind pressures, suction and uplifts.
- iii. In case the buildings, structures and infrastructures are founded on marine clay deposits it will be advisable to adopt either under-reamed piled foundations, or individual column footing with a reinforced concrete beam located at the level of the ground, or a continuous reinforced concrete strip footing.
- iv. Wherever, the top soil could become slushy due to flooding, the top layer of 30 cm depth of soil should not be considered for providing lateral stability.
- v. In storm surge prone areas, it will be preferable to construct the community structures, like schools, cyclone shelters, etc. by raising the level of the ground protected by provision of retaining walls at sufficient distance away from the building, taken to such depth that no erosion takes place due to receding storm surge. Alternatively, construct the community structures on stilts with no masonry or bracing upto the probable maximum surge level.

C. PROTECTION OF AREAS FROM FLOODS

This may require one or more of the following actions.

- i. Construction of embankments against the water spills from the source of flooding like rivers, large drain etc.
- ii. Construction of high enough embankments/bund around the planning area.
- iii. Raising the planning area above the high flood level.
- iv. Construction/improvement of drainage paths to effectively drain the water from the planning area.
- v. Construction of buildings and structures on deep foundations going below the depth of scour or on stilts with deep enough foundations under water.
- vi. Flood proofing works such as the following:
 - Providing Quick Drainage facility, consisting of
 - Revitalisation of secondary and primary drainage channels after establishing the drainage blockage points;
 - Provision of additional waterways;
 - Clearing of clogged cross drainage works;
 - Providing Human and Animal Shelters for population living within embankments in the form of raised platform or use of available high ground.
- vii. Anti-erosion actions in affected areas

viii. Any other suitable measure.

- Note:
1. Similar protection methods could be used against flooding caused in cyclone prone areas by high intensity rains or by the storm surge.
 2. The concept of land zoning should be kept in mind for areas where protection works are taken up to decide inter-se priority for location of structures considering possibility of failure of protection works during extreme disaster events.

20 GASOLINE (MOTOR FUEL) FILLING STATIONS AND GASOLINE FILLING CUM SERVICE STATIONS

20.1 DEFINITION

20.1.1

The term "Filling Station" is a place of retail business engaged in supplying and dispensing of Gasoline (Motor- Fuel) and motor oil essential for the normal operation of automobiles.

20.1.2

The term "Filling cum Service station" is a place of retail business engaged in supplying goods and services essential for the normal operation of automobiles. These include dispensing Gasoline and Motor- oil, the sales and services of tyres, batteries and other automobiles accessories and replacement item and washing and lubrication. They do not include the body of tender work, painting or other major motors repairs and over hauling.

20.2 REQUIREMENTS OF FILLING STATIONS AND FILLING-CUM SERVICE - STATION.

20.2.1 SPACE REQUIREMENTS:

(1) The minimum size for the location of Filling Station and filling cum Service Station shall be as follows:

filling station 30.00 mts. x 36.50 mts. (In intensely developed areas the minimum frontage may be relaxed by the Authority after complete investigation).

Filling cum service station shall be 2000 sq.mts. having frontage not less then 30.00 mts.

(2) Except in hilly terrain, the plot should be on level ground.

(3) Every filling station should provide for one parking space for each four employees with a minimum of two car parking space.

(4) In the case of filling cum service stations in addition to parking space requirements given above provision should also be made for one car parking space for each service station.

(5) Common plot shall not be required.

20.3 TRAFFIC REQUIREMENTS:

(1) A filling station or filling cum service station is a major generator of traffic and as such present a degree of traffic hazard on the road on which it is sited. This

potential traffic hazard determines the number of station that can be permitted in any section of the road or the highway or in a section of a city, the objective being to keep the traffic hazard to the minimum.

(2) A filling station or filling cum service station should not be located opposite a break or opening in the central verge on a dual carriage as this will encourage the traffic to cross the road while entering a filling station or filling cum service station.

(3) A filling station or filling cum service station preferably may not be sited too closed to an intersection to a traffic island on the main road. To assure satisfactory wearing distances, the minimum desirable distance between an access to a station and the tangent point of the traffic island or intersection should be 80.00 mts.

(4) In the case of main road provided along with a service road or a marginal access road, the access to the station should be provided from the service the marginal access road and not from the main road.

(5) On road having heavy traffic, it is desirable to provide one station on either side of the road so that vehicles are not required to cross the road. On roads the traffic cannot support two filling station open on either side, one may be located on either sides provided the site is not close to a junction and confirm to the requirements of the 3 above.

(6) Sitting of the stations on road curves or bends are a safety hazard and should be avoided. Filling cum service station should not be located adjacent to the residential houses.

(7) The minimum distance of the property line of the filling station from the central line of the road must not be less than 15.00 mts. or half the proposed right of way of the road, whichever is more. In the case of National Highways, and major road in the urban areas they should be set back so as to be outside the ultimate right of way of the highway along which it is to be located. However, variations can be approved in special cases if allowed by the competent Authority after complete investigation.

(8) The heaping up of the oil cans and other goods within the premises which tend to create a sort of ugly character to the area should be discouraged, Preferential locations in highly congested highways in urban areas create traffic problems which need proper and careful examination. Similarly the concentration of filling station and service station etc. along traffic or arteries creates problems in maintaining street capacity thereby depriving the community facility for mass and quick transport along the highway in urban.

20.4 ENTRANCE AND EXIT CONSIDERATIONS:

(1) In all location of filling stations. The basic principle governing location as well as exit and entrance consideration is to minimize as much as possible interference with normal flow of traffic on the road.

(2) For easy flow of the station a minimum frontage of 30.00 mts. shall be provided

with wide and easy entrance and exit kerbs, vehicles entering and leaving the station should be fully visible to the traffic on the main road and there should not be any obstruction to view between the filling station pumps and the road.

(3) The following minimum requirements for the ingress should be observed.

- i) Maximum width of the drive ways at the side walk: 9.00 mt
- ii) Minimum angle of intersection of drive ways with the street pavement 60 (degree)
- iii) Minimum angle of intersection of drive ways with the street pavement 60 (degree)
- iv) Minimum distance from any drive way to any exterior property line: 6.00 mts.
- v) Minimum distance from any driveway to any interior plot line : 3.00 mts.
- vi) Minimum distance between kerbs sites : 9.00 mts

- c) **Support & Attachment:** Every wall sign shall be securely attached to walls, wooden blocks or anchorage with wood used in connection with screws, staples or nails shall not be considered proper anchorage, except in the case of wall signs attached to walls of wood.
- d) **Reflectors:** Lighting reflectors may project 2.4 Mts. beyond the face of the wall provided such reflectors are at least 4 m above the footpath level, but in no case shall such reflectors project beyond a vertical plane one meter inside the kerb line.

21.7 PROJECTING SIGNS

No projecting sign or any part of its supports or frame work shall project more than 2 meters beyond the main face of the building to which such sign is attached. At every place where pedestrians may pass underneath a projecting sign, an over-head clearance of at least 2.5 Mts. shall be maintained.

Comprehensive Sign Design: Particularly in the case of an existing structure where because of the code amendment new signage is likely to cover less of the building facade than previously, it is hoped that Comprehensive Sign Designs will encourage the rehabilitation of the building front itself as well as the careful design of the sign that goes on it.

LAND USE ZONING IN HAZARD PRONE AREAS – GUIDELINES (Regulation No. 32.1)

1 OBJECTIVES

- 1.1 The basic objective of land use zoning is to regulate land use in hazard prone areas to minimise the damage caused to the habitat, as a result of natural hazards viz. earthquakes, cyclonic storms and floods which recur from time to time. Land Use Zoning, therefore, aims at determining the locations and the extent of areas likely to be adversely affected by the hazards of different intensities and frequencies, and to develop such areas in a fashion that the loss to the development is reduced to the minimum.
- 1.2 Land Use Zoning envisages certain restrictions on the indiscriminate development of the "unprotected" hazard prone areas and to specify conditions for safer development by protecting the area from severe losses. In the former case, boundaries of different zones are to be established to prevent unrestricted growth there.

2. SCOPE

2.1 Areas covered under Development Plan

The guidelines for Land Use Zoning in Hazard Prone Areas are to be taken into consideration while formulating the Development Plan and Area Plan under the Town Planning and Urban Development Act.

2.2 Areas-not covered under Development Plan

In such areas, these guidelines may be issued to the various local bodies, Municipalities, Individual Areas and Panchayats, enabling them to act while siting various development projects and deciding on construction of buildings, etc.

3. IDENTIFICATION OF HAZARD PRONE AREAS

3.1 Earthquake Prone Areas

- a. Intensities of VII or more on Modified Mercalli or MSK intensity scale are considered moderate to high. Areas under seismic zone III, IV and V as specified in IS 1893 are based on intensities VII, VIII, IX or more. Therefore, all areas in these three zones will be considered prone to earthquake hazards.

- b. In these zones the areas which have soil conditions including the level of water table favourable to liquefaction or settlements under earthquake vibrations will have greater risk to buildings and structures which will be of special consideration under Land Use Zoning.
- c. Under these zones, those hilly areas which are identified to have poor stability conditions and where landslides could be triggered by earthquake or where due to prior saturated conditions, mud flow could be initiated by earthquakes and where avalanches could be triggered by earthquake will be specially risk prone.
- d. Whereas, earthquake hazard prone areas defined in 'a' above are identified on the map given in IS 1893 to small scale and more easily identified in the larger scale statewide maps given in the Vulnerability Atlas of India, the special risky areas as defined in 'b' and 'c' above, have to be determined specifically for the planning area under consideration through special studies to be carried out by geologists and geo-technical engineers.

3.2 Cyclone Prone Areas

- a. Areas prone to cyclonic storms are along the sea coast of India where the cyclonic wind velocities of 47 meter per second or more are specified in the Wind Velocity Map given in IS 875 (part 3) to a small scale and easily identified in the Vulnerability Atlas of India where the Maps are drawn statewide to a larger scale.
- b. In these cyclone prone areas, those areas which are likely to be subjected to heavy rain induced floods or to flooding by sea-water under the conditions of storm surge, are specially risky due to damage by flood flow and inundation under water.
- c. Whereas, areas under 'a' are easily identified, those with special risk as under 'b' have to be identified by special contour survey of the planning area under consideration and study of the past flooding and storm surge history of the area. These studies may have to be carried out through the Survey of India or locally appointed survey teams, and by reference to the Central Water Commission, Government of India and the concerned department of Gujarat State.

3.3 Flood Prone Areas

- a. The flood prone areas in river plains (unprotected and protected by bunds) are indicated in the Flood Atlas of India prepared by the Central Water Commission and reproduced on larger scale in the statewide

maps in the Vulnerability Atlas of India.

- b. Besides the above areas, other areas can be flooded under conditions of heavy intensity rains, inundation in depressions, backflow in drains, inadequate drainage, failure of protection works, etc.
- c. Whereas, the flood-prone areas under 'a' are identified on the available maps as indicated, the areas under 'b' have to be identified through local contour survey and study of the flood history of the planning area. Such studies may be carried out through Survey of India or local survey teams, and by reference to the Central Water Commission and the concerned department of Gujarat State.

3.3.1 Land Use Zoning for Flood Safety

Some important considerations for regulating the land use in the planning areas are given below:

- i. Every settlement needs some open areas such as parks, play-grounds, gardens etc. In one way it will be possible to develop such areas by restricting any building activity in vulnerable areas. Such a development will be in the interest of providing proper environment for the growth of such settlement.
- ii. On the same analogy, certain areas on either side of the existing and proposed drains (including rural drains) should be declared as green belts where no building or other activity should be allowed. This will not only facilitate improvements of these drains in future for taking discharges on account of growing urbanisation; but will also help in minimising the damage due to drainage congestion wherever rainfall of higher frequency than designed is experienced. These green belts at suitable locations can also be developed as parks and gardens.
- iii. In the existing developed areas, possibilities of protecting/ relocation/ exchanging the sites of vital installation like electricity sub-station/power houses, telephone exchange, etc. should be seriously examined, so that these are always safe from possible flood damage. Similarly, the pump station the tubewells meant for drinking water supply should be raised above the high flood levels.
- iv. Similarly, possibility of removing or bypassing buildings/structures obstructing existing natural drainage lines should be seriously considered. In any case, with immediate effect unplanned growth can be restricted so that no construction obstructing natural drainage or resulting in increased flood hazard is allowed.

4. APPROACH FOR LAND USE ZONING

Following two alternatives can be adopted for dealing with the disaster risk problems.

- a. *Leaving the area unprotected.* In this case it will be necessary to specify Land Use Zoning for various development purposes as recommended under Para 6.
- b. Using protection methods for the areas as a whole or in the construction of buildings, structures and infrastructure facilities to cater for the hazard intensities likely in the planning area as recommended under Appendix-B.

It will be appropriate to prioritise buildings, structures and infrastructures in terms of their importance from the point of view of impact of damage on the socio-economic structure of the society. Prioritisation scheme is suggested under Para 5.

5. PRIORITISATION

In regard to Land Use Zoning, different types of buildings and utility services may be grouped under three priorities as indicated below.

Priority 1. Defence installation, industries, public utilities like hospitals, electricity installations, water supply, telephone exchange, aerodromes, railway stations, commercial centres, libraries, other buildings or installations with contents of high economic value.

Priority 2. Public institutions, Government offices, universities and residential areas.

Priority 3. Parks, play grounds, wood lands, gardens

6. REGULATION FOR LAND USE ZONING

- i. Installations and Buildings of Priority 1 should be located in such a fashion that the area is above the levels corresponding to a 100 year flood or the maximum observed flood levels whichever higher. Similarly they should also be above the levels corresponding to a 50 year rainfall flooding and the likely submersion due to drainage congestion.
- ii. Buildings of Priority 2 should be located outside the 25 year flood or a 10 year rainfall contour, provided that the buildings if constructed between the 10 and 25 year contours should have either high plinth level above 25 year flood mark or constructed on columns or stilts, with ground area left for the unimportant uses.

- ii. Activities of Priority 3 viz. play grounds, gardens and parks etc. can be located in areas vulnerable to frequent floods.

Appendix – B

PROTECTION OF BUILDINGS STRUCTURES AND INFRASTRUCTURES IN HAZARD PRONE AREAS (Building Regulation No. 32.1)

A. PROTECTION OF AREAS FROM EARTHQUAKES

- i. In those areas where there are no dangers of soil liquefaction or settlements or landslides, all building structures and infrastructures should be designed using the relevant Indian Standards as provided in the Building Regulations and the National Building Code
- ii. Soils subjected to liquefaction potential under earthquake shaking, can be improved by compaction to desired relative densities, so as to prevent the possibility of liquefaction.
- iii. Buildings and structures could be founded on deep bearing piles going to non-liquefiable dense layers.
- iv. Steep slopes can be made more stable by terracing and construction of retaining walls and breast walls, and by ensuring good drainage of water so that the saturation of the hill-slope is avoided.
- iii. Any other appropriate engineering intervention to save the building structures or infrastructure from the fury of the earthquake.

Note : The protective action given under (ii) to (v) will usually involve large amount of costs and should only be considered in the case of large and costly structures. For ordinary buildings the cost of improvement of the site will usually be uneconomical, hence bad sites should be excluded by Land Use Zoning.

B. PROTECTION FROM CYCLONIC WIND DAMAGE

- i. Buildings, structures and infrastructures in the cyclone prone areas should be designed according to the Indian Standards and Guidelines as provided in the Regulations and the National Building Code.
- ii. Light utility structures used for electrical transmission and distribution, and towers for communications, chimney stacks of industrial structures require special design considerations against the cyclonic wind pressures, suctions and uplifts.
- iii. In case the buildings, structures and infrastructures are founded on marine clay deposits it will be advisable to adopt either under-reamed piled foundations, or individual column footing with a reinforced concrete beam located at the level

of the ground, or a continuous reinforced concrete strip footing.

- iv. Wherever, the top soil could become slushy due to flooding, the top layer of 30 cm depth of soil should not be considered for providing lateral stability
- v. In storm surge prone areas, it will be preferable to construct the community structures, like schools, cyclone shelters, etc. by raising the level of the ground protected by provision of retaining walls at sufficient distance away from the building, taken to such depth that no erosion takes place due to receding storm surge. Alternatively, construct the community structures on stilts with no masonry or bracing upto the probable maximum surge level.

C. PROTECTION OF AREAS FROM FLOODS

This may require one or more of the following actions.

- i. Construction of embankments against the water spills from the source of flooding like rivers, large drain etc.
- ii. Construction of high enough embankments/bund around the planning area.
- iii. Raising the planning area above the high flood level.
- iv. Construction/improvement of drainage paths to effectively drain the water from the planning area.
- v. Construction of buildings and structures on deep foundations going below the depth of scour or on stilts with deep enough foundations under water.
- vi. Flood proofing works such as the following:
 - Providing Quick Drainage facility, consisting of
 - Revitalisation of secondary and primary drainage channels after establishing the drainage blockage points;
 - Provision of additional waterways;
 - Clearing of clogged cross drainage works;
 - Providing Human and Animal Shelters for population living within embankments in the form of raised platform or use of available high ground.
- vii. Anti-erosion actions in affected areas
- viii. Any other suitable measure.

Note: 1. Similar protection methods could be used against flooding caused in cyclone prone areas by high intensity rains or by the storm surge.

2. The concept of land zoning should be kept in mind for areas where protection works are taken up to decide inter-se priority for location of structures considering possibility of failure of protection works during extreme disaster events.

Appendix-A

LAND USE ZONING IN HAZARD PRONE AREAS – GUIDELINES (Regulation No. 32.1)**1 OBJECTIVES**

- 1.1 The basic objective of land use zoning is to regulate land use in hazard prone areas to minimise the damage caused to the habitat, as a result of natural hazards viz. earthquakes, cyclonic storms and floods which recur from time to time. Land Use Zoning, therefore, aims at determining the locations and the extent of areas likely to be adversely affected by the hazards of different intensities and frequencies, and to develop such areas in a fashion that the loss to the development is reduced to the minimum.
- 1.2 Land Use Zoning envisages certain restrictions on the indiscriminate development of the "unprotected" hazard prone areas and to specify conditions for safer development by protecting the area from severe losses. In the former case, boundaries of different zones are to be established to prevent unrestricted growth there.

2. SCOPE**2.1 Areas covered under Development Plan**

The guidelines for Land Use Zoning in Hazard Prone Areas are to be taken into consideration while formulating the Development Plan and Area Plan under the Town Planning and Urban Development Act.

2.2 Areas not covered under Development Plan

In such areas, these guidelines may be issued to the various local bodies, Municipalities, Individual Areas and Panchayats, enabling them to act while siting various development projects and deciding on construction of buildings, etc.

3. IDENTIFICATION OF HAZARD PRONE AREAS**3.1 Earthquake Prone Areas**

- a. Intensities of VII or more on Modified Mercalli or MSK intensity scale are considered moderate to high. Areas under seismic zone III, IV and V as specified in IS 1893 are based on intensities VII, VIII, IX or more. Therefore, all areas in these three zones will be considered prone to earthquake hazards.
- b. In these zones the areas which have soil conditions including the level of water table favourable to liquefaction or settlements under earthquake vibrations will have greater risk to buildings and structures which will be of special consideration under Land Use Zoning.
- c. Under these zones, those hilly areas which are identified to have poor stability conditions and where landslides could be triggered by earthquake or where due to prior saturated conditions, mud flow could be initiated by earthquakes and where avalanches could be triggered by earthquake will be specially risk prone.
- d. Whereas, earthquake hazard prone areas defined in 'a' above are identified on the

map given in IS 1893 to small scale and more easily identified in the larger scale statewide maps given in the Vulnerability Atlas of India, the special risky areas as defined in 'b' and 'c' above, have to be determined specifically for the planning area under consideration through special studies to be carried out by geologists and geo-technical engineers.

3.2 Cyclone Prone Areas

- a. Areas prone to cyclonic storms are along the sea coast of India where the cyclonic wind velocities of 47 meter per second or more are specified in the Wind Velocity Map given in IS 875 (part 3) to a small scale and easily identified in the Vulnerability Atlas of India where the Maps are drawn statewide to a larger scale.
- b. In these cyclone prone areas, those areas which are likely to be subjected to heavy rain induced floods or to flooding by sea-water under the conditions of storm surge, are specially risky due to damage by flood flow and inundation under water.
- c. Whereas, areas under 'a' are easily identified, those with special risk as under 'b' have to be identified by special contour survey of the planning area under consideration and study of the past flooding and storm surge history of the area. These studies may have to be carried out through the Survey of India or locally appointed survey teams, and by reference to the Central Water Commission, Government of India and the concerned department of Gujarat State.

3.3 Flood Prone Areas

- a. The flood prone areas in river plains (unprotected and protected by bunds) are indicated in the Flood Atlas of India prepared by the Central Water Commission and reproduced on larger scale in the statewide maps in the Vulnerability Atlas of India.
- b. Besides the above areas, other areas can be flooded under conditions of heavy intensity rains, inundation in depressions, backflow in drains, inadequate drainage, failure of protection works, etc.
- c. Whereas, the flood prone areas under 'a' are identified on the available maps as indicated, the areas under 'b' have to be identified through local contour survey and study of the flood history of the planning area. Such studies may be carried out through Survey of India or local survey teams, and by reference to the Central Water Commission and the concerned department of Gujarat State.

3.3.1 Land Use Zoning for Flood Safety

Some important considerations for regulating the land use in the planning areas are given below:

- i. Every settlement needs some open areas such as parks, play-grounds, gardens etc. In one way it will be possible to develop such areas by restricting any building activity in vulnerable areas. Such a development will be in the interest of providing proper environment for the growth of such settlement.

- ii. On the same analogy, certain areas on either side of the existing and proposed drains (including rural drains) should be declared as green belts where no building or other activity should be allowed. This will not only facilitate improvements of these drains in future for taking discharges on account of growing urbanisation, but will also help in minimising the damage due to drainage congestion wherever rainfall of higher frequency than designed is experienced. These green belts at suitable locations can also be developed as parks and gardens.
- iii. In the existing developed areas, possibilities of protecting/ relocation/ exchanging the sites of vital installation like electricity sub-station/power houses, telephone exchange, etc. should be seriously examined, so that these are always safe from possible flood damage. Similarly, the pump station the tubewells meant for drinking water supply should be raised above the high flood levels.
- iv. Similarly, possibility of removing or bypassing buildings/structures obstructing existing natural drainage lines should be seriously considered. In any case, with immediate effect unplanned growth can be restricted so that no construction obstructing natural drainage or resulting in increased flood hazard is allowed.

4. APPROACH FOR LAND USE ZONING

Following two alternatives can be adopted for dealing with the disaster risk problems.

- a. *Leaving the area unprotected.* In this case it will be necessary to specify Land Use Zoning for various development purposes as recommended under Para 6.
- b. Using protection methods for the areas as a whole or in the construction of buildings, structures and infrastructure facilities to cater for the hazard intensities likely in the planning area as recommended under Appendix-B.

It will be appropriate to prioritise buildings, structures and infrastructures in terms of their importance from the point of view of impact of damage on the socio-economic structure of the society. Prioritisation scheme is suggested under Para 5.

5. PRIORITISATION

In regard to Land Use Zoning, different types of buildings and utility services may be grouped under three priorities as indicated below.

Priority 1. Defence installation, industries, public utilities like hospitals, electricity installations, water supply, telephone exchange, aerodromes, railway stations, commercial centres, libraries, other buildings or installations with contents of high economic value.

Priority 2. Public institutions, Government offices, universities and residential areas.

Priority 3. Parks, play grounds, wood lands, gardens

6. REGULATION FOR LAND USE ZONING

- i. Installations and Buildings of Priority 1 should be located in such a fashion that the area is above the levels corresponding to a 100 year flood or the maximum observed flood levels whichever higher. Similarly they should also be above the levels corresponding to a 50 year rainfall flooding and the likely submersion due to drainage congestion.
- ii. Buildings of Priority 2 should be located outside the 25 year flood or a 10 year rainfall contour, provided that the buildings if constructed between the 10 and 25 year contours should have either high plinth level above 25 year flood mark or constructed on columns or stilts, with ground area left for the unimportant uses.
- iii. Activities of Priority 3 viz. play grounds, gardens and parks etc. can be located in areas vulnerable to frequent floods.

Appendix - B**PROTECTION OF BUILDINGS STRUCTURES AND INFRASTRUCTURES IN HAZARD PRONE AREAS**
(Building Regulation No. 32.1)**A. PROTECTION OF AREAS FROM EARTHQUAKES**

- i. In those areas where there are no dangers of soil liquefaction or settlements or landslides, all building structures and infrastructures should be designed using the relevant Indian Standards as provided in the Building Regulations and the National Building Code
- ii. Soils subjected to liquefaction potential under earthquake shaking, can be improved by compaction to desired relative densities, so as to prevent the possibility of liquefaction.
- iii. Buildings and structures could be founded on deep bearing piles going to non-liquefiable dense layers.
- iv. Steep slopes can be made more stable by terracing and construction of retaining walls and breast walls, and by ensuring good drainage of water so that the saturation of the hill-slope is avoided.
- iii. Any other appropriate engineering intervention to save the building structures or infrastructure from the fury of the earthquake.

Note : The protective action given under (ii) to (v) will usually involve large amount of costs and should only be considered in the case of large and costly structures. For ordinary buildings the cost of improvement of the site will usually be uneconomical, hence bad sites should be excluded by Land Use Zoning.

B. PROTECTION FROM CYCLONIC WIND DAMAGE

- i. Buildings, structures and infrastructures in the cyclone prone areas should be designed according to the Indian Standards and Guidelines as provided in the Regulations and the National Building Code.
- ii. Light utility structures used for electrical transmission and distribution, and towers for communications, chimney stacks of industrial structures require special design considerations against the cyclonic wind pressures, suctions and uplifts.
- iii. In case the buildings, structures and infrastructures are founded on marine clay deposits it will be advisable to adopt either under-reamed piled foundations, or individual column footing with a reinforced concrete beam located at the level of the ground, or a continuous reinforced concrete strip footing.
- iv. Wherever, the top soil could become slushy due to flooding, the top layer of 30 cm depth of soil should not be considered for providing lateral stability
- v. In storm surge prone areas, it will be preferable to construct the community structures, like schools, cyclone shelters, etc. by raising the level of the ground protected by provision of retaining walls at sufficient distance away from the building, taken to such depth that no erosion takes place due to receding storm surge. Alternatively, construct the community structures on stilts with no masonry or bracing upto the probable maximum surge level.

C. PROTECTION OF AREAS FROM FLOODS

This may require one or more of the following actions.

- i. Construction of embankments against the water spills from the source of flooding like rivers, large drain etc.
- ii. Construction of high enough embankments/bund around the planning area.
- iii. Raising the planning area above the high flood level.
- iv. Construction/improvement of drainage paths to effectively drain the water from the planning area.
- v. Construction of buildings and structures on deep foundations going below the depth of scour or on stilts with deep enough foundations under water.
- vi. Flood proofing works such as the following:
 - Providing Quick Drainage facility, consisting of
 - Revitalisation of secondary and primary drainage channels after establishing the drainage blockage points;
 - Provision of additional waterways;
 - Clearing of clogged cross drainage works;
 - Providing Human and Animal Shelters for population living within embankments in the form of raised platform or use of available high ground.
- vii. Anti-erosion actions in affected areas
- viii. Any other suitable measure.

- Note:
1. Similar protection methods could be used against flooding caused in cyclone prone areas by high intensity rains or by the storm surge.
 2. The concept of land zoning should be kept in mind for areas where protection works are taken up to decide inter-se priority for location of structures considering possibility of failure of protection works during extreme disaster events.

ક્રમાંક : જીએચકેએચ-૪૯-૨૦૦૪/એપીએમ/૩૧૦૩/૫૦૩૬/ગ.—ખેત ઉત્પન્ન બજાર સમિતિ, સાવલી, જિ. વડોદરાને સહકારી કાયદાની કલમ ૪૬(૧) મુજબ કારણદર્શક નોટીસ તા. ૧૪-૧૧-૨૦૦૩થી આપવામાં આવેલ. આ નોટીસમાં બજાર સમિતિ તેને સોંપવામાં આવેલ ફરજો બજાવવામાં કસૂર કરવા, સત્તાનો દુરુપયોગ કરી મનસ્વીપણે સત્તા વાપરવા તેમજ સંસ્થાને આર્થિક નુકશાન પહોંચાડવાની કામગીરી કરી હોવા બાબતે બજાર ધારાની કલમ ૪૪ હેઠળ હાથ ધરાયેલ તપાસ અહેવાલની વિગતો અન્વયે જે આક્ષેપો કરવામાં આવેલા છે તે અંગે લેખિત જવાબ રજૂ કરવા/રૂબરૂ રજૂઆત કરવા તા. ૧૯-૧૨-૨૦૦૩ના રોજ હાજર રહેવા જણાવેલ. તેના અસંધાને બજાર સમિતિ તરફથી જવાબ રજૂ કરવા સમયની માંગણી કરતાં તા. ૧૨-૦૧-૨૦૦૪, તા. ૨૭-૦૨-૨૦૦૪, તા. ૦૩-૦૩-૨૦૦૪, તા. ૨૩-૦૪-૨૦૦૪, તા. ૧૫-૦૫-૨૦૦૪ સુધી મુદતો આપવામાં આવેલ અને છેલ્લે તા. ૧૯-૦૬-૨૦૦૪ના રોજ સુનાવણી કરવામાં આવેલ અને તે દિવસે બજાર સમિતિએ મુદ્દાવાર જવાબ રજૂ કરેલ જેની વિગતો નીચે મુજબ છે.

(૧) મુખ્ય યાર્ડ ખાતે ૨૬ ગોડાઉનના બાંધકામ કરવા અંગે તા. ૨૧-૦૪-૨૦૦૩ના રોજની પેટા કમીટીએ કરેલ નિર્ણયની સામાન્ય સભાએ બહાલી મેળવેલ નથી.

આ સંદર્ભમાં બજાર સમિતિ તરફથી રજૂ કરવામાં આવેલ વિગતો જોતાં સામાન્ય સભાની બહાલી મેળવવામાં આવેલ હોઈ અન્ય પ્રશ્ન ઉપસ્થિત થતો નથી.

(૨) ખેત ઉત્પન્ન બજાર સમિતિની યાર્ડ વિકાસ અને બાંધકામ પેટા સમિતિની તા. ૦૯-૦૬-૨૦૦૩ના ઠરાવમાં ૨૦ ગોડાઉન બાંધકામ પ્લીન્ય લેવલ હોવાનું ઠરાવેલ છે. જ્યારે માન્ય ઈજનેરશ્રીના નકશા તથા સ્થળ ઉપર બાંધકામમાં આવેલ ગોડાઉનોની સંખ્યા ૨૬ છે, જે વિસંગત છે.

આ બાબતે રજૂ કરેલ જવાબ ગ્રાહ્ય રાખવાપાત્ર છે.

(૩) રૂ. ૩૩,૫૩,૪૩૩/-ના અંદાજિત ખર્ચ ગોડાઉન બાંધકામ અંગેની ટેન્ડર નોટીસ નિયમોનુસાર દૈનિક વર્તમાનપત્રમાં પ્રસિધ્ધ કરવામાં આવેલ નથી પરંતુ ખેત ઉત્પન્ન બજાર સમિતિના મુખ્ય કાર્યાલયે નોટીસ પ્રસિધ્ધ કરેલ છે.

બજાર સમિતિએ આ મુદ્દાના બચાવમાં જણાવેલ છે કે ગોડાઉન બાંધકામ અંગે દૈનિક વર્તમાનપત્રોમાં જાહેરાત આપવામાં આવેલ નથી. પરંતુ બજાર સમિતિના નોટીસબોર્ડ પર જાહેરાત પ્રસિધ્ધ કરવામાં આવેલ છે અને તેના અનુસંધાને આવેલ ટેન્ડર પૈકી સૌથી નીચા ભાવના ટેન્ડરને નિયામકશ્રી, ખેત બજાર અને ગ્રામ્ય અર્થતંત્ર, ગાંધીનગરની માન્ય ઈજનેરની પેનલ પરના ઈજનેરશ્રીની સુપરવિઝન હેઠળ કામગીરી કરવામાં આવેલ છે.

બજાર સમિતિની આ રજૂઆત ગ્રાહ્ય રાખી શકાય તેમ નથી. કારણ કે બાંધકામની અંદાજિત કિંમત રૂ. ૩૩,૫૩,૪૩૩/- જેટલી છે ત્યારે ટેન્ડર જાહેરાત બજાર સમિતિના નોટીસ બોર્ડ પર જ પ્રસિધ્ધ કરવી વ્યાજબી નથી. આ ક્ષેત્રમાં તંદુરસ્ત હરિફાઈ જળવાઈ રહે અને સાથોસાથ કામની ગુણવત્તા પણ જળવાઈ રહે તે ખૂબ જ અગત્યનું છે. આમ આ બાબતમાં સમિતિએ/સમિતિના હોદ્દદારોએ ગોડાઉન બાંધકામ અંગેની કાર્યપદ્ધતિમાં બજાર ધારાની જોગવાઈનું ઉલ્લંઘન કરેલ છે.

(૪) ખેત ઉત્પન્ન બજાર સમિતિ દ્વારા બાંધકામની ટેન્ડર નોટીસ ફક્ત કાર્યાલયના નોટીસ બોર્ડ ઉપર પ્રસિધ્ધ કરવામાં આવેલ છે. આમ છતાં ખેત ઉત્પન્ન બજાર સમિતિને કાલોલ, જિ. પંચમહાલના ઈજારદારના ટેન્ડર મળેલ છે અને તેને બાંધકામનો વર્કઓર્ડર આપેલ છે. જે બાબત શંકાસ્પદ જણાય છે.

બજાર સમિતિએ આ મુદ્દાના બચાવમાં જણાવેલ છે કે ગોડાઉન બાંધકામ અંગે દૈનિક વર્તમાનપત્રોમાં જાહેરાત આપવામાં આવેલ નથી. પરંતુ બજાર સમિતિના નોટીસબોર્ડ પર જાહેરાત પ્રસિધ્ધ કરવામાં આવેલ છે અને તેના અનુસંધાને આવેલ ટેન્ડર પૈકી સૌથી નીચા ભાવના ટેન્ડરને નિયામકશ્રી, ખેત બજાર અને ગ્રામ્ય અર્થતંત્ર, ગાંધીનગરની માન્ય ઈજનેરની પેનલ પરના ઈજનેરશ્રીની સુપરવિઝન હેઠળ કામગીરી કરવામાં આવેલ છે.

બજાર સમિતિની આ રજૂઆત ગ્રાહ્ય રાખી શકાય તેમ નથી. કારણ કે બાંધકામની અંદાજિત કિંમત રૂ. ૩૩,૫૩,૪૩૩/- જેટલી છે ત્યારે ટેન્ડર જાહેરાત બજાર સમિતિના નોટીસબોર્ડ પર જ પ્રસિધ્ધ કરવી વ્યાજબી નથી. આ ક્ષેત્રમાં તંદુરસ્ત હરિફાઈ જળવાઈ રહે અને સાથોસાથ કામની ગુણવત્તા પણ જળવાઈ રહે તે ખૂબ જ અગત્યનું છે. આમ આ બાબતમાં સમિતિએ/સમિતિના હોદ્દદારોએ ગોડાઉન બાંધકામ અંગેની કાર્યપદ્ધતિમાં બજાર ધારાની જોગવાઈનું ઉલ્લંઘન કરેલ છે.

(૫) ખેત ઉત્પન્ન બજાર સમિતિએ પ્રસિધ્ધ કરેલ ટેન્ડર નોટીસની શરતો મુજબ બાંધકામનું કામ યોગ્ય શ્રેણીમાં નોંધાયેલ તથા બાંધકામના કામોનો અનુભવ ધરાવતા ઈજારદારો પાસેથી ભાવપત્રો મંગાવેલ છે. પરંતુ બાંધકામનું કામ શિવશક્તિ કન્સ્ટ્રક્શન કંપની, કાલોલને સુપરત કરેલ છે. જે કોઈ શ્રેણીમાં નોંધાયેલ સરકાર માન્ય ઈજારદાર હોવાનું જણાયેલ નથી. તેમજ આ ઈજારદારના કામોના અનુભવની ચકાસણી કરેલ નથી.

મુદ્દા નં. ૩માં સ્પષ્ટતા કર્યા મુજબ ટેન્ડરની જાહેરાત આપવાની પ્રક્રિયામાં જ ક્ષતિ રાખવામાં આવેલ છે. તંદુરસ્ત હરિફાઈ થાય તે માટે દૈનિક વર્તમાનપત્રોમાં જાહેરાત આપવી જોઈતી હતી, તેમ કરવામાં આવેલ નથી. વળી, સમિતિએ રજૂ કરેલ જવાબમાં જ જણાવેલ છે કે શિવશક્તિ કન્સ્ટ્રક્શન કંપની જે તે સમયે સરકારના નોંધાયેલ ઈજારદાર ન હતા. જેથી રજૂઆત ગ્રાહ્ય રાખી શકાય નહીં.

(૬) ખેત ઉત્પન્ન બજાર સમિતિએ ગોડાઉન બાંધકામની મંજૂરી સ્થાનિક ગ્રામ પંચાયત તરફથી લેવામાં આવેલ નથી. તેમજ જિલ્લા વિકાસ અધિકારી, વડોદરાના તા. ૨૦-૧૧-૧૯૭૮ના હુકમમાં ખેત ઉત્પન્ન બજાર સમિતિના મુખ્ય યાર્ડની જમીન પૈકી સર્વે નં. ૨૬૭૧ની ૦.૧૧.૧૩ હેક્ટર આરની જમીનને બિન ખેતીની મંજૂરી તથા તેમાં સામેલ નકશા મુજબના બાંધકામની મંજૂરી મળેલ છે. પરંતુ ખેત ઉત્પન્ન બજાર સમિતિ દ્વારા હાલમાં બાંધકામ ચાલુ છે એવા ૨૬ ગોડાઉનોની જમીન સર્વે નં. ૭ની બિન ખેતીની કે બાંધકામ માટેની સક્ષમ અધિકારીની મંજૂરી મેળવેલ નથી. આમ ખેત ઉત્પન્ન બજાર સમિતિના હોદ્દદારોએ ફરજ પ્રત્યે નિષ્કાળજી સેવેલ હોવાનું ફલિત થાય છે.

બજાર સમિતિએ રજૂ કરેલ જવાબ પરથી જ પ્રસ્થાપિત થાય છે કે સમિતિએ બાંધકામ અંગે સક્ષમ કક્ષાએથી પૂર્વ મંજૂરી મેળવેલ નથી.

(૭) ખેત ઉત્પન્ન બજાર સમિતિએ રૂ. ૩૩,૫૩,૪૩૩/-ના અંદાજિત ખર્ચે ૨૬ ગોડાઉનોનું બાંધકામ કરેલ છે. જે પૈકી એક ગોડાઉનનો પ્રોજેક્ટ ખર્ચ અંદાજે રૂ. ૧,૨૮,૯૭૮/- જેટલો થયેલ છે. જ્યારે ખેત ઉત્પન્ન બજાર સમિતિએ ગોડાઉન દીઠ રૂ. ૨૧,૦૦૦/-ની ડિપોઝીટ તથા માસિક રૂ. ૬૦૦/-ના માસિક ભાડે ફાળવવા તા. ૧૧-૦૩-૨૦૦૩ના રોજની પેટા

કમિટિના ઠરાવ નં. ૨થી ઠરાવેલ છે. જે નિયામકશ્રી, ખેત બજાર અને ગ્રામ્ય અર્થતંત્રના તા. ૨૭-૧૧-૧૯૯૯, તા. ૦૧-૦૨-૨૦૦૦ અને તા. ૧૭-૦૪-૨૦૦૦ના પરિપત્રથી આપેલ માર્ગદર્શક સૂચનાઓને સુસંગત નથી. આમ ખેત ઉત્પન્ન બજાર સમિતિને આર્થિક નુકશાન થાય તેવી કાર્યવાહી કરેલ છે.

બજાર સમિતિએ રજૂ કરેલ જવાબ પરથી સ્પષ્ટ થાય છે કે ગોડાઉનની ફાળવણી અંગે નિયામકશ્રી, ખેત બજાર અને ગ્રામ્ય અર્થતંત્રના તા. ૨૭-૧૧-૧૯૯૯ના પરિપત્રથી પરિપત્રિત કરેલ સૂચનાઓનો અમલ થયેલ નથી.

(૮). ખેત ઉત્પન્ન બજાર સમિતિ દ્વારા બાંધકામ કરવામાં આવેલ ૨૬ ગોડાઉનોના અંદાજિત બાંધકામ ખર્ચ રૂ. ૩૩,૫૩,૪૩૩/- દર્શાવેલ છે. જે ચોરસ ફૂટ દીઠ રૂ. ૨૫૧/- જેટલો થાય છે. જે સરકારશ્રીના બાંધકામ વિભાગના પ્રવર્તમાન ભાવોની સરખામણીમાં વધારે જણાય છે. આથી સદરહુ બાંધકામ ખર્ચ બજાર ફંડના નાણાકીય ઔચિત્યના સિધ્ધાંતોને ધ્યાનમાં લીધા સિવાય કરેલ હોવાનું જણાય છે.

સમિતિએ રજૂ કરેલ જવાબમાં વાંધાજનક બાબત જણાતી નથી.

બજાર સમિતિ, સાવલીએ ગોડાઉન બાંધકામ અંગે અપનાવેલ કાર્યપદ્ધતિ ઉપર જણાવેલ સમગ્ર બાબતો નિગાહે લેતાં ધોરણસરની નથી તથા નિયામક, ખેત બજાર અને ગ્રામ્ય અર્થતંત્ર દ્વારા તા. ૨૭-૧૧-૧૯૯૯થી તથા વખતોવખત પરિપત્રિત કરવામાં આવતી સૂચનાઓનો ભંગ/ઉલ્લંઘન કરવા સમાન છે, તે જોતાં હું નીચે મુજબ હુકમ કરું છું.

હુકમ

ઉપરોક્ત વિચારણાના પરિપ્રેક્ષ્યમાં તમામ બાબતો ધ્યાને લેતાં ખેત ઉત્પન્ન બજાર અધિનિયમની કલમ ૪૬(૧)થી મળેલ સત્તાની રૂએ, ખેત ઉત્પન્ન બજાર સમિતિ, સાવલી, જિ. વડોદરાને તાત્કાલિક અસરથી પદચ્યુત કરવામાં આવે છે. અને સદર બજાર સમિતિમાં કાર્યો બજાવવા માટે તથા તેનો વહીવટ કરવા માટે નાયબ નિયામકશ્રી, ખેત બજાર અને ગ્રામ્ય અર્થતંત્ર અને જિલ્લા રજિસ્ટ્રાર, સહકારી મંડળીઓ, વડોદરાની વહીવટદાર તરીકે તાત્કાલિક અસરથી નિમણૂક કરવામાં આવે છે.

ગુજરાતના રાજ્યપાલશ્રીના હુકમથી અને તેમના નામે,

GASOLINE (MOTOR FUEL) FILLING STATIONS AND ASOLINE FILLING CUM SERVICE STATIONS

19.1 DEFINITION

19.1.1

The term "Filling Station" is a place of retail business engaged in supplying and dispensing of Gasoline (Motor- Fuel) and motor oil essential for the normal operation of automobiles.

19.1.2

The term "Filling cum Service station" is a place of retail business engaged in supplying goods and services essential for the normal operation of automobiles. These include dispensing Gasoline and Motor- oil, the sales and services of tyres, batteries and other automobiles accessories and replacement item and washing and lubrication. They do not include the body of tender work, painting or other major motors repairs and over hauling.

19.2 REQUIREMENTS OF FILLING STATIONS AND FILLING-CUM SERVICE - STATION.

19.2.1 SPACE REQUIREMENTS:

(1) The minimum size for the location of Filling Station and filling cum Service Station shall be as follows:

filling station 30.00 mts. x 36.50 mts. (In intensely developed areas the minimum frontage may be relaxed by the Authority after complete investigation).

Filling cum service station shall be 2000 sq.mts. having frontage not less then 30.00 mts.

(2) Except in hilly terrain, the plot should be on level ground.

(3) Every filling station should provide for one parking space for each four employees with a minimum of two car parking space.

(4) In the case of filling cum service stations in addition to parking space requirements given above provision should also be made for one car parking space for each service station.

(5) Common plot shall not be required.

19.3 TRAFFIC REQUIREMENTS:

(1) A filling station or filling cum service station is a major generator of traffic and as such present a degree of traffic hazard on the road on which it is sited. This potential traffic hazard determines the number of station that can be permitted in any section of the road or the highway or in a section of a city, the objective being to keep the traffic hazard to the minimum.

(2) A filling station or filling cum service station should not be located opposite a break or opening in the central verge on a dual carriage as this will encourage the traffic to cross the road while entering a filling station or filling cum service station.

(3) A filling station or filling cum service station preferably may not be sited too closed to an intersection to a traffic island on the main road. To assure satisfactory wearing distances, the minimum desirable distance between an access to a station and the tangent point of the traffic island or intersection should be 80.00 mts.

(4) In the case of main road provided along with a service road or a marginal access road, the access to the station should be provided from the service the marginal access road and not from the main road.

(5) On road having heavy traffic, it is desirable to provide one station on either side of the road so that vehicles are not required to cross the road. On roads the traffic cannot support two filling station open on either side, one may be located on either sides provided the site is not close to a junction and confirm to the requirements of the 3 above.

(6) Sitting of the stations on road curves or bends are a safety hazard and should be avoided. Filling cum service station should not be located adjacent to the residential houses.

(7) The minimum distance of the property line, of the filling station from the central line of the road must not be less than 15.00 mts. or half the proposed right of way of the road, whichever is more. In the case of National Highways, and major road in the urban areas they should be set back so as to be outside the ultimate right of way of the highway along which it is to be located. However, variations can be approved in special cases if allowed by the competent Authority after complete investigation.

(8) The heaping up of the oil cans and other goods within the premises which tend to create a sort of ugly character to the area should be discouraged. Preferential locations in highly congested highways in urban areas create traffic problems which need proper and careful examination. Similarly the concentration of filling station and service station etc. along traffic or arteries creates problems in maintaining street capacity thereby depriving the community facility for mass and quick transport along the highway in urban.

19.4 ENTRANCE AND EXIT CONSIDERATIONS:

(2) For easy flow of the station a minimum frontage of 30.00 mts. shall be provided with wide and easy entrance and exit kerbs, vehicles entering and leaving the station should be fully visible to the traffic on the main road and there should not be any obstruction to view between the filling station pumps and the road.

(3) The following minimum requirements for the ingress should be observed.

- i) Maximum width of the drive ways at the side walk: 9.00 mt
- ii) Minimum angle of intersection of drive ways with the street pavement 60 (degree)
- iii) Minimum angle of intersection of drive ways with the street pavement 60 (degree)
- iv) Minimum distance from any drive way to any exterior property line: 6.00 mts.
- v) Minimum distance from any driveway to any interior plot line : 3.00 mts.
- vi) Minimum distance between kerbs sites : 9.00 mts

If any such testing by the Competent Authority shall show reduced degree of pollution in the wastes sufficient to exempt from payment of surcharge the same shall become effective from the next billing period.
- 21) If the owner is of the opinion that for any reason the nature of the sewage presently being discharged into the sewer has a substantially lessened degree of pollution than as shown by prior tests, he may request the Competent Authority to make new test more than once in each billing period to be made at his expense. Such test will be taken by the Engineer at his discretion within three months from the date of application. If the Engineer is satisfied that such tests were made when the plant was operating under normal conditions, the results of the latest tests shall be used in computing or exempting from the surcharge.

Appendix-A

LAND USE ZONING IN HAZARD PRONE AREAS – GUIDELINES (Regulation No. 32.1)**1 OBJECTIVES**

- 1.1 The basic objective of land use zoning is to regulate land use in hazard prone areas to minimise the damage caused to the habitat, as a result of natural hazards viz. earthquakes, cyclonic storms and floods which recur from time to time. Land Use Zoning, therefore, aims at determining the locations and the extent of areas likely to be adversely affected by the hazards of different intensities and frequencies, and to develop such areas in a fashion that the loss to the development is reduced to the minimum.
- 1.2 Land Use Zoning envisages certain restrictions on the indiscriminate development of the "unprotected" hazard prone areas and to specify conditions for safer development by protecting the area from severe losses. In the former case, boundaries of different zones are to be established to prevent unrestricted growth there.

2. SCOPE**2.1 Areas covered under Development Plan**

The guidelines for Land Use Zoning in Hazard Prone Areas are to be taken into consideration while formulating the Development Plan and Area Plan under the Town Planning and Urban Development Act.

2.2 Areas not covered under Development Plan

In such areas, these guidelines may be issued to the various local bodies, Municipalities, Individual Areas and Panchayats, enabling them to act while siting various development projects and deciding on construction of buildings, etc.

3. IDENTIFICATION OF HAZARD PRONE AREAS**3.1 Earthquake Prone Areas**

- a. Intensities of VII or more on Modified Mercalli or MSK intensity scale are considered moderate to high. Areas under seismic zone III, IV and V as specified in IS 1893 are based on intensities VII, VIII, IX or more. Therefore, all areas in these three zones will be considered prone to earthquake hazards.
- b. In these zones the areas which have soil conditions including the level of water table favourable to liquefaction or settlements under earthquake vibrations will have greater risk to buildings and structures which will be of special consideration under Land Use Zoning.
- c. Under these zones, those hilly areas which are identified to have poor stability conditions and where landslides could be triggered by earthquake or where due to prior saturated conditions, mud flow could be initiated by earthquakes and where avalanches could be triggered by earthquake will be specially risk prone.

- d. Whereas, earthquake hazard prone areas defined in 'a' above are identified on the map given in IS 1893 to small scale and more easily identified in the larger scale statewise maps given in the Vulnerability Atlas of India, the special risky areas as defined in 'b' and 'c' above, have to be determined specifically for the planning area under consideration through special studies to be carried out by geologists and geo-technical engineers.

3.2 Cyclone Prone Areas

- a. Areas prone to cyclonic storms are along the sea coast of India where the cyclonic wind velocities of 47 meter per second or more are specified in the Wind Velocity Map given in IS 875 (part 3) to a small scale and easily identified in the Vulnerability Atlas of India where the Maps are drawn statewise to a larger scale.
- b. In these cyclone prone areas, those areas which are likely to be subjected to heavy rain induced floods or to flooding by sea-water under the conditions of storm surge, are specially risky due to damage by flood flow and inundation under water.
- c. Whereas, areas under 'a' are easily identified, those with special risk as under 'b' have to be identified by special contour survey of the planning area under consideration and study of the past flooding and storm surge history of the area. These studies may have to be carried out through the Survey of India or locally appointed survey teams, and by reference to the Central Water Commission, Government of India and the concerned department of Gujarat State.

3.3 Flood Prone Areas

- a. The flood prone areas in river plains (unprotected and protected by bunds) are indicated in the Flood Atlas of India prepared by the Central Water Commission and reproduced on larger scale in the statewise maps in the Vulnerability Atlas of India.
- b. Besides the above areas, other areas can be flooded under conditions of heavy intensity rains, inundation in depressions, backflow in drains, inadequate drainage, failure of protection works, etc.
- c. Whereas, the flood prone areas under 'a' are identified on the available maps as indicated, the areas under 'b' have to be identified through local contour survey and study of the flood history of the planning area. Such studies may be carried out through Survey of India or local survey teams, and by reference to the Central Water Commission and the concerned department of Gujarat State.

3.3.1 Land Use Zoning for Flood Safety

Some important considerations for regulating the land use in the planning areas are given below:

- i. Every settlement needs some open areas such as parks, play-grounds, gardens etc. In one way it will be possible to develop such areas by restricting any

building activity in vulnerable areas. Such a development will be in the interest of providing proper environment for the growth of such settlement.

- ii. On the same analogy, certain areas on either side of the existing and proposed drains (including rural drains) should be declared as green belts where no building or other activity should be allowed. This will not only facilitate improvements of these drains in future for taking discharges on account of growing urbanisation, but will also help in minimising the damage due to drainage congestion wherever rainfall of higher frequency than designed is experienced. These green belts at suitable locations can also be developed as parks and gardens.
- iii. In the existing developed areas, possibilities of protecting/ relocation/ exchanging the sites of vital installation like electricity sub-station/power houses, telephone exchange, etc. should be seriously examined, so that these are always safe from possible flood damage. Similarly, the pump station the tubewells meant for drinking water supply should be raised above the high flood levels.
- iv. Similarly, possibility of removing or bypassing buildings/structures obstructing existing natural drainage lines should be seriously considered. In any case, with immediate effect unplanned growth can be restricted so that no construction obstructing natural drainage or resulting in increased flood hazard is allowed.

4. APPROACH FOR LAND USE ZONING

Following two alternatives can be adopted for dealing with the disaster risk problems.

- a. *Leaving the area unprotected.* In this case it will be necessary to specify Land Use Zoning for various development purposes as recommended under Para 6.
- b. Using protection methods for the areas as a whole or in the construction of buildings, structures and infrastructure facilities to cater for the hazard intensities likely in the planning area as recommended under Appendix-B.

It will be appropriate to prioritise buildings, structures and infrastructures in terms of their importance from the point of view of impact of damage on the socio-economic structure of the society. Prioritisation scheme is suggested under Para 5.

5. PRIORITISATION

In regard to Land Use Zoning, different types of buildings and utility services may be grouped under three priorities as indicated below.

Priority 1. Defence installation, industries, public utilities like hospitals, electricity installations, water supply, telephone exchange, aerodromes, railway stations, commercial centres, libraries, other buildings or installations with contents of high economic value.

Priority 2. Public institutions, Government offices, universities and residential areas.

Priority 3. Parks, play grounds, wood lands, gardens

6. REGULATION FOR LAND USE ZONING

- i. Installations and Buildings of Priority 1 should be located in such a fashion that the area is above the levels corresponding to a 100 year flood or the maximum observed flood levels whichever higher. Similarly they should also be above the levels corresponding to a 50 year rainfall flooding and the likely submersion due to drainage congestion.
- ii. Buildings of Priority 2 should be located outside the 25 year flood or a 10 year rainfall contour, provided that the buildings if constructed between the 10 and 25 year contours should have either high plinth level above 25 year flood mark or constructed on columns or stilts, with ground area left for the unimportant uses.
- ii. Activities of Priority 3 viz. play grounds, gardens and parks etc. can be located in areas vulnerable to frequent floods.

Appendix - B**PROTECTION OF BUILDINGS STRUCTURES AND INFRASTRUCTURES IN HAZARD PRONE AREAS**
(Building Regulation No. 32.1)**A. PROTECTION OF AREAS FROM EARTHQUAKES**

- i. In those areas where there are no dangers of soil liquefaction or settlements or landslides, all building structures and infrastructures should be designed using the relevant Indian Standards as provided in the Building Regulations and the National Building Code
- ii. Soils subjected to liquefaction potential under earthquake shaking, can be improved by compaction to desired relative densities, so as to prevent the possibility of liquefaction.
- iii. Buildings and structures could be founded on deep bearing piles going to non-liquefiable dense layers.
- iv. Steep slopes can be made more stable by terracing and construction of retaining walls and breast walls, and by ensuring good drainage of water so that the saturation of the hill-slope is avoided.
- iii. Any other appropriate engineering intervention to save the building structures or infrastructure from the fury of the earthquake.

Note : The protective action given under (ii) to (v) will usually involve large amount of costs and should only be considered in the case of large and costly structures. For ordinary buildings the cost of improvement of the site will usually be uneconomical, hence bad sites should be excluded by Land Use Zoning.

B. PROTECTION FROM CYCLONIC WIND DAMAGE

- i. Buildings, structures and infrastructures in the cyclone prone areas should be designed according to the Indian Standards and Guidelines as provided in the Regulations and the National Building Code.
- ii. Light utility structures used for electrical transmission and distribution, and towers for communications, chimney stacks of industrial structures require special design considerations against the cyclonic wind pressures, suctions and uplifts.
- iii. In case the buildings, structures and infrastructures are founded on marine clay deposits it will be advisable to adopt either under-reamed piled foundations, or individual column footing with a reinforced concrete beam located at the level of the ground, or a continuous reinforced concrete strip footing.
- iv. Wherever, the top soil could become slushy due to flooding, the top layer of 30 cm depth of soil should not be considered for providing lateral stability
- v. In storm surge prone areas, it will be preferable to construct the community structures, like schools, cyclone shelters, etc. by raising the level of the ground protected by provision of retaining walls at sufficient distance away from the building, taken to such depth that no erosion takes place due to receding storm surge. Alternatively, construct the community structures on stilts with no masonry or bracing upto the probable maximum surge level.

C. PROTECTION OF AREAS FROM FLOODS

This may require one or more of the following actions.

- i. Construction of embankments against the water spills from the source of flooding like rivers, large drain etc.
- ii. Construction of high enough embankments/bund around the planning area.
- iii. Raising the planning area above the high flood level.
- iv. Construction/improvement of drainage paths to effectively drain the water from the planning area.
- v. Construction of buildings and structures on deep foundations going below the depth of scour or on stilts with deep enough foundations under water.
- vi. Flood proofing works such as the following:
 - Providing Quick Drainage facility, consisting of
 - Revitalisation of secondary and primary drainage channels after establishing the drainage blockage points;
 - Provision of additional waterways;
 - Clearing of clogged cross drainage works;
 - Providing Human and Animal Shelters for population living within embankments in the form of raised platform or use of available high ground.
- vii. Anti-erosion actions in affected areas
- viii. Any other suitable measure.

- Note:
1. Similar protection methods could be used against flooding caused in cyclone prone areas by high intensity rains or by the storm surge.
 2. The concept of land zoning should be kept in mind for areas where protection works are taken up to decide inter-se priority for location of structures considering possibility of failure of protection works during extreme disaster events.

ગુજરાત સરકારને લાગે છે કે આ સાથે જોડેલ અનુસૂચિમાં નિર્દિષ્ટ કરેલ મહેસુલ વિભાગ હસ્તકના તળાવો/જળાશયોમાં સંગ્રહ થયેલ પાણીનો ઉપયોગ રાજ્ય સરકાર દ્વારા અનુસૂચિમાં જણાવેલ તળાવો/જળાશયો ગુજરાત રાજ્યની હદમાં આવેલ જે તે વિસ્તાર, ગામ, તાલુકો અને જિલ્લા માટે વપરાશ કરી શકશે.

તેથી હવે મુંબઈ સિંચાઈ અધિનિયમ (ગુજરાત એમેન્ડમેન્ટ-૧૯૮૨) ની કલમ ૫ ની મળેલ સત્તાની રુએ ગુજરાત સરકાર જાહેર કરે છે કે, ગુજરાત રાજ્યના પત્રમાં તળાવો/જળાશયોને વોટર બોર્ડીઝ તરીકે જાહેર કરવામાં આવે છે અને આ જાહેરનામું પ્રસિધ્ધ થયાની તારીખથી ત્રણ મહિના પૂરા થયા પછી સદરહું પાણી વાપરવામાં આવશે અને ઉપયોગમાં લેવાશે.
